STEREO AUDIO CODEC WITH USB INTERFACE, SINGLE-ENDED ANALOG INPUT/OUTPUT, AND S/PDIF

Check for Samples: PCM2903B

FEATURES

- On-Chip USB Interface:
 - With Full-Speed Transceivers
 - Fully Compliant with USB 2.0 Specification
 - Certified by USB-IF
 - Partially Programmable Descriptors ⁽¹⁾
 - USB Adaptive Mode for Playback
 - USB Asynchronous Mode for Record
 - Self-Powered
- 16-Bit Delta-Sigma ADC and DAC
- Sampling Rates:
 - DAC: 32, 44.1, 48 kHz
 - ADC: 8, 11.025, 16, 22.05, 32, 44.1, 48 kHz
- **On-Chip Clock Generator With Single 12-MHz Clock Source**
- S/PDIF Input/Output
- Single Power Supply:
 - 3.3 V Typical
- Stereo ADC:
 - Analog Performance at V_{CCC} = V_{CCP1} = V_{CCP2}
 - $= V_{CCX} = V_{DD} = 3.3 V:$
 - THD+N = 0.01%
 - SNR = 89 dB
 - Dynamic Range = 89 dB
 - Decimation Digital Filter:
 - Passband Ripple = ±0.05 dB
 - Stop-Band Attenuation = –65 dB
 - Single-Ended Voltage Input
 - Antialiasing Filter Included
 - Digital HPF Included

(1) The descriptor can be modified by changing a mask.

- Stereo DAC:
- Analog Performance at V_{CCC} = V_{CCP1} = V_{CCP2} $= V_{CCX} = V_{DD} = 3.3 V:$
 - THD+N = 0.005%
 - SNR = 96 dB
 - Dynamic Range = 93 dB
- Oversampling Digital Filter:
 - Passband Ripple = ±0.1 dB
 - Stop-Band Attenuation = -43 dB
- Single-Ended Voltage Output
- Analog LPF Included
- **Multifunctions:**
 - Human Interface Device (HID) Function: Volume and and Mute Controls
 - Suspend Flag Function
- 28-Pin SSOP Package

APPLICATIONS

- **USB Audio Speaker**
- **USB Headset**
- **USB Monitor**
- USB Audio Interface Box

DESCRIPTION

The PCM2903B is Texas Instruments' single-chip, USB, stereo audio codec with a USB-compliant fullspeed protocol controller and S/PDIF. The USB protocol controller requires no software code, but the USB descriptors can be modified in some areas (for example, vendor ID and/or product ID). The PCM2903B employs SpAct™ architecture, TI's unique system that recovers the audio clock from USB packet data. On-chip analog PLLs with SpAct enable playback and record with low clock jitter as well as independent playback and record sampling rates.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet. SpAct is a trademark of Texas Instruments.

System Two, Audio Precision are trademarks of Audio Precision, Inc. All other trademarks are the property of their respective owners.

SLES228-DECEMBER 2008

www.ti.com

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

PACKAGE/ORDERING INFORMATION ⁽¹⁾									
PRODUCT	PACKAGE-LEAD	PACKAGE DESIGNATOR	SPECIFIED TEMPERATURE RANGE	PACKAGE MARKING	ORDERING NUMBER	TRANSPORT MEDIA, QUANTITY			
					PCM2903BDB	Rails, 47			
PCM2903BDB	SSOP-28	DB	–25°C to 85°C	PCM2903B	PCM2903BDBR	Tape and Reel, 2000			

(1) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI website at www.ti.com.

ABSOLUTE MAXIMUM RATINGS⁽¹⁾

Over operating free-air temperature range (unless otherwise noted).

	PARAMETER	PCM2903B	UNIT
Supply voltage, V _{CC0}	C, V _{CCP1} , V _{CCP2} , V _{CCX} , V _{DD}	-0.3 to 4	V
Supply voltage differ	ences, V _{CCC} , V _{CCP1} , V _{CCP2} , V _{CCX} , V _{DD}	±0.1	V
Ground voltage diffe	rences, AGNDC, AGNDP, AGNDX, DGND, DGNDU	±0.1	V
Digital input values	SEL0, SEL1, DIN	-0.3 to 6.5	V
Digital input voltage	D+, D–, HID0, HID1, HID2, XTI, XTO, DOUT, SSPND	–0.3 to (V _{DD} + 0.3) < 4	V
Analog input voltage	V _{IN} L, V _{IN} R, V _{COM} , V _{OUT} R, V _{OUT} L	–0.3 to (V _{CCC} + 0.3) < 4	V
Input current (any pi	ns except supplies)	±10	mA
Ambient temperature	e under bias	-40 to +125	°C
Storage temperature	e, T _{stg}	-55 to +150	°C
Junction temperature	e T _J	+150	°C
Lead temperature (s	oldering, 5s)	+260	°C
Package temperatur	e (IR reflow, peak)	+250	°C

(1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

DETAILED DESCRIPTION

USB INTERFACE

Control data and audio data are transferred to the PCM2903B via D+ (pin 1) and D- (pin 2). All data to/from the PCM2903B are transferred at full speed. The device descriptor contains the information described in Table 2. The device descriptor can be modified on request; contact a Texas Instruments representative for details.

Table 2. Device Descriptor

USB revision	2.0 compliant				
Device class	0x00 (device-defined interface level)				
Device subclass	0x00 (not specified)				
Device protocol	0x00 (not specified)				
Max packet size for end-point 0	8 bytes				
Vendor ID	0x08BB (default value, can be modified)				
Product ID	0x29B3 (default value, can be modified)				
Device release number	1.0 (0x0100)				
Number of configurations	1				
Vendor strings	String #1 (see Table 4)				
Product strings	String #2 (see Table 4)				
Serial number	Not supported				

The configuration descriptor contains the information described in Table 3. The configuration descriptor can be modified on request; contact a Texas Instruments representative for details.

Table 3. Configuration Descriptor

Interface	Four interfaces		
Power attribute	0xC0 (Self-powered, no remote wakeup)		
Maximum power	0x0A (20 mA. Default value, can be modified		

The string descriptor contains the information described in Table 4. The string descriptor can be modified on request; contact a Texas Instruments representative for details.

Table 4. String Descriptor

#0	0x0409
#1	Burr-Brown from TI (default value, can be modified)
#2	USB Audio CODEC (default value, can be modified)

SLES228-DECEMBER 2008

DEVICE CONFIGURATON

Figure 34 illustrates the USB audio function topology. The PCM2903B has four interfaces. Each interface consists of alternative settings.

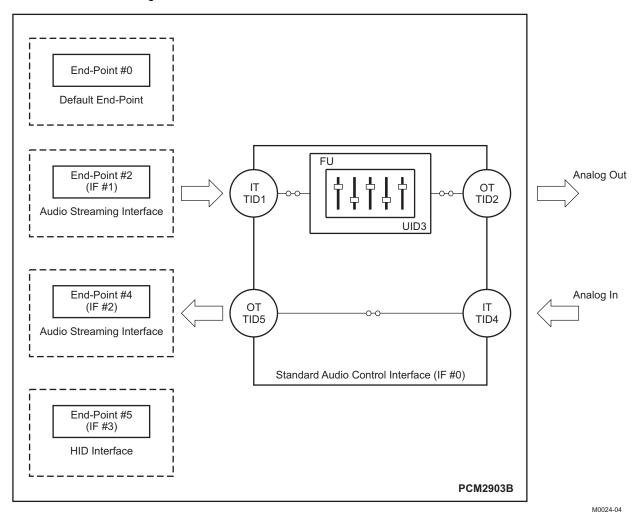

Figure 34. USB Audio Function Topology

Interface #0

www.ti.com

Interface #0 is the control interface. Alternative setting #0 is the only possible setting for interface #0. Alternative setting #0 describes the standard audio control interface. The audio control interface consists of a single terminal. The PCM2903B has the following five terminals:

- Input terminal (IT #1) for isochronous-out stream
- Output terminal (OT #2) for audio analog output
- Feature unit (FU #3) for DAC digital attenuator
- Input terminal (IT #4) for audio analog input
- Output terminal (OT #5) for isochronous-in stream

Input terminal #1 is defined as *USB stream* (terminal type 0x0101). Input terminal #1 can accept two-channel audio streams consisting of left and right channels. Output terminal #2 is defined as a *speaker* (terminal type 0x0301). Input terminal #4 is defined as a *microphone* (terminal type 0x0201). Output terminal #5 is defined as a *USB stream* (terminal type 0x0101). Output terminal #5 can generate two-channel audio streams composed of left and right channel data. Feature unit #3 supports the following sound control features:

- Volume control
- Mute control

The built-in digital volume controller can be manipulated by an audio class specific request from 0 dB to -64 dB in 1-dB steps. Changes are made by incrementing or decrementing by one step (1 dB) for every $1/f_S$ time interval until the volume level has reached the requested value. Each channel can be set for different values. The master volume control is not supported. A request to the master volume is stalled and ignored. The built-in digital mute controller can be manipulated by audio class-specific request. A master mute control request is acceptable. A request to an individual channel is stalled and ignored.

Interface #1

Interface #1 is the audio streaming data-out interface. Interface #1 has the five alternative settings described in Table 5. Alternative setting #0 is the zero-bandwidth setting.

ALTERNATIVE SETTING		DA	TA FORMAT	TRANSFER MODE	SAMPLING RATE (kHz)
00		Zero bandwidth			
01	16-bit	Stereo	Twos complement (PCM)	Adaptive	32, 44.1, 48
02	16-bit	Mono	Twos complement (PCM)	Adaptive	32, 44.1, 48
03	8-bit	Stereo	Twos complement (PCM)	Adaptive	32, 44.1, 48
04	8-bit	Mono	Twos complement (PCM)	Adaptive	32, 44.1, 48

Table 5. Interface #1 Alternative Settings

SLES228-DECEMBER 2008

Interface #2

Interface #2 is the audio streaming data-in interface. Interface #2 has the 19 alternative settings described in Table 6. Alternative setting #0 is the zero-bandwidth setting. All other alternative settings are operational settings.

ALTERNATIVE SETTING		DAT	A FORMAT	TRANSFER MODE	SAMPLING RATE (kHz)
00			Zero bandwidth	-!	+
01	16-bit	Stereo	Twos complement (PCM)	Asynchronous	48
02	16-bit	Mono	Twos complement (PCM)	Asynchronous	48
03	16-bit	Stereo	Twos complement (PCM)	Asynchronous	44.1
04	16-bit	Mono	Twos complement (PCM)	Asynchronous	44.1
05	16-bit	Stereo	Twos complement (PCM)	Asynchronous	32
06	16-bit	Mono	Twos complement (PCM)	Asynchronous	32
07	16-bit	Stereo	Twos complement (PCM)	Asynchronous	22.05
08	16-bit	Mono	Twos complement (PCM)	Asynchronous	22.05
09	16-bit	Stereo	Twos complement (PCM)	Asynchronous	16
0A	16-bit	Mono	Twos complement (PCM)	Asynchronous	16
0B	8-bit	Stereo	Twos complement (PCM)	Asynchronous	16
0C	8-bit	Mono	Twos complement (PCM)	Asynchronous	16
0D	8-bit	Stereo	Twos complement (PCM)	Asynchronous	8
0E	8-bit	Mono	Twos complement (PCM)	Asynchronous	8
0F	16-bit	Stereo	Twos complement (PCM)	Synchronous	11.025
10	16-bit	Mono	Twos complement (PCM)	Synchronous	11.025
11	8-bit	Stereo	Twos complement (PCM)	Synchronous	11.025
12	8-bit	Mono	Twos complement (PCM)	Synchronous	11.025

Table 6. Interface #2 Alternative Settings

Interface #3

Interface #3 is the interrupt data-in interface. Alternative setting #0 is the only possible setting for interface #3. Interface #3 consists of the HID consumer control device and reports the status of these three key parameters:

- Mute (0xE209)
- Volume up (0xE909)
- Volume down (0xEA09)

End-Points

The PCM2903B has the following four end-points:

- Control end-point (EP #0)
- Isochronous-out audio data stream end-point (EP #2)
- Isochronous-in audio data stream end-point (EP #4)
- HID end-point (EP #5)

The control end-point is a default end-point. The control end-point is used to control all functions of the PCM2903B by the standard USB request and an USB audio class specific request from the host. The isochronous-out audio data stream end-point is an audio sink end-point, which receives the PCM audio data. The isochronous-out audio data stream end-point accepts the adaptive transfer mode. The isochronous-in audio data stream end-point that transmits the PCM audio data. The isochronous-in audio data stream end-point uses asynchronous transfer mode. The HID end-point is an interrupt-in end-point. HID end-point reports HID0, HID1, and HID2 pin status every 32 ms.

The human interface device (HID) pins are defined as consumer control devices. The HID function is designed as an independent end-point from both isochronous-in and -out end-points. Therefore, the result obtained from the HID operation depends on the host software. Typically, the HID function is used as the primary audio-out device.

Clock and Reset

www.ti.com

The PCM2903B requires a 12-MHz (\pm 500 ppm) clock for the USB and audio function, which can be generated by a built-in crystal oscillator with a 12-MHz crystal resonator or supplied by an external clock. The 12-MHz crystal resonator must be connected to XTI (pin 21) and XTO (pin 20) with one high (1-M Ω) resistor and two small capacitors, the capacitance of which depends on the load capacitance of the crystal resonator. If the external clock is used, the clock must be supplied to XTI, and XTO must be open.

The PCM2903B has an internal power-on reset circuit, which triggers automatically when V_{DD} (pin 27) exceeds 2.5 V typical (2.7 V to 2.2 V). Approximately 700 µs is required until internal reset release.

Digital Audio Interface

The PCM2903B employs both S/PDIF input and output. Isochronous-out data from the host are encoded to the S/PDIF output and the DAC analog output. Input data are selected as either S/PDIF or ADC analog input. When the device detects an S/PDIF input and successfully locks on the received data, the isochronous-in transfer data source is automatically selected from S/PDIF itself; otherwise, the data source selected is the ADC analog input.

This feature is a customer option. It is the responsibility of the user to implement this feature.

Supported Input/Output Data

The following data formats are accepted by the S/PDIF input and output. All other data formats are unable to use S/PDIF.

- 48-kHz 16-bit stereo
- 44.1-kHz 16-bit stereo
- 32-kHz 16-bit stereo

Any mismatch of the sampling rate between the input S/PDIF signal and the host command is not acceptable. Any mismatch of the data format between the input S/PDIF signal and the host command may cause unexpected results, with the following exceptions:

- Recording in monaural format from stereo data input at the same data rate
- · Recording in 8-bit format from 16-bit data input at the same data rate

A combination of these two conditions is not acceptable.

For playback, all possible data-rate sources are converted to 16-bit stereo format at the same source data rate.

Channel Status Information

The channel status information is fixed as consumer application, PCM mode, copyright, and digital/digital converter. All other bits are fixed as 0's except for the sample frequency, which is set automatically according to the data received through the USB.

Copyright Management

Isochronous-in data are affected by the serial copy management system (SCMS). When the control bit indicates that the received digital audio data are original, the input digital audio data are transferred to the host. If the data are indicated as first generation or higher, the transferred data are routed to the analog input.

Digital audio data output is always encoded as original with SCMS control.

SLES228-DECEMBER 2008

INTERFACE SEQUENCE

Power On, Attach, and Playback Sequence

The PCM2903B is ready for setup when the reset sequence has finished and the USB bus is attached. In order to perform certain reset sequences defined in the USB specification, V_{DD} , V_{CCC} , V_{CCP1} , V_{CCP2} , and V_{CCX} must rise up within 10 ms / 3.3 V. After connection has been established by setup, the PCM2903B is ready to accept USB audio data. While waiting, the audio data (idle state) and analog output are set to bipolar zero (BPZ).

When receiving the audio data, the PCM2903B stores the first audio packet, which contained 1-ms audio data, into the internal storage buffer. The PCM2903B starts playing the audio data when detecting the next start of frame (SOF) packet, as illustrated in Figure 35 and Figure 36.

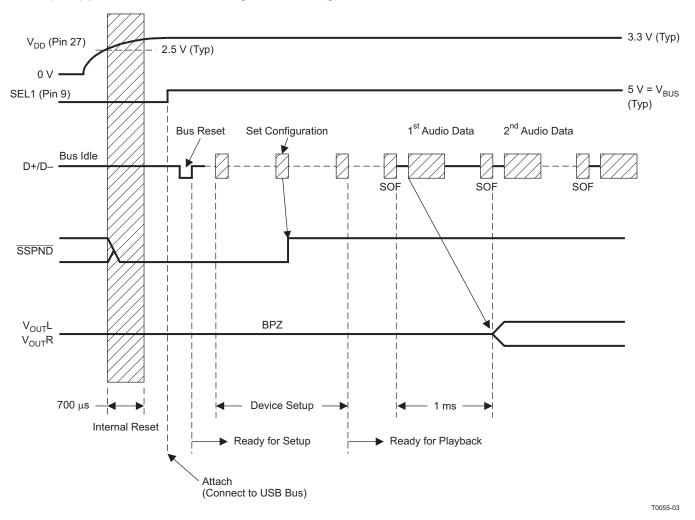

Figure 35. Attach After Power On

TEXAS INSTRUMENTS PCM2903B

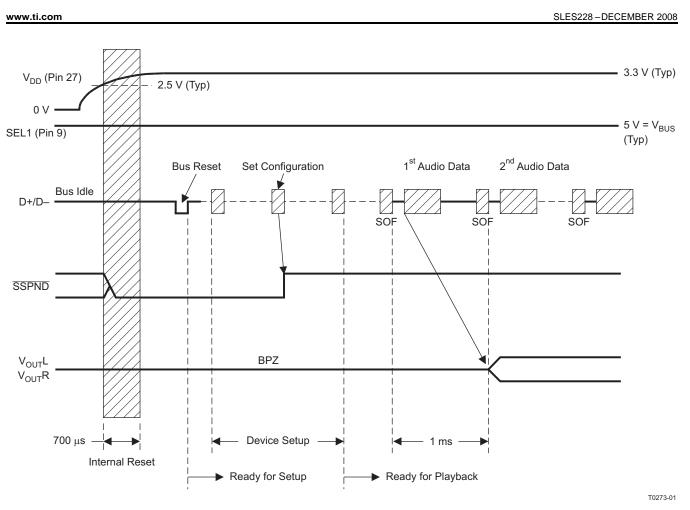

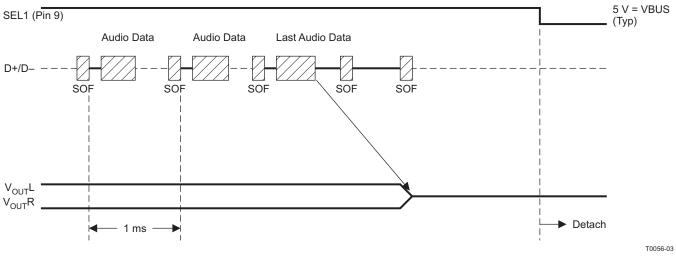

Figure 36. Power-On Under Attach

Play, Stop, and Detach Sequence

When the host finishes or aborts the playback, the PCM2903B stops playing after the last audio data have played, as shown in Figure 37.

SLES228-DECEMBER 2008

Record Sequence

The PCM2903B starts the audio capture into the internal memory after receiving the SET_INTERFACE command, as shown in Figure 38.

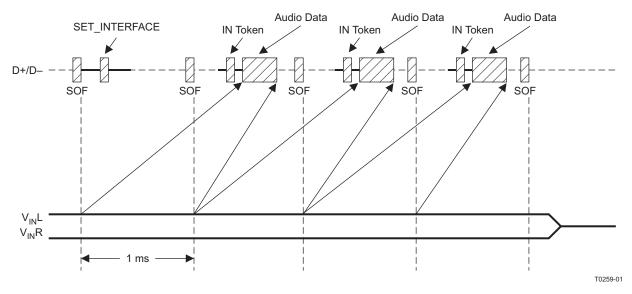

Figure 38. Record Sequence

Suspend and Resume Sequence

The PCM2903B enters the suspend state after it detects a constant idle state on the <u>USB bus</u> (approximately 5 ms), as shown in Figure 39. While the PCM2903B enters the suspend state, the <u>SSPND</u> flag (pin 28) is asserted. The PCM2903B wakes up immediately after detecting a non-idle state on the USB bus.

APPLICATION INFORMATION

TYPICAL CIRCUIT CONNECTION

Figure 40 illustrates a typical circuit connection for a simple application. The circuit illustrated is for information only. The entire board design should be considered to meet the USB specification as a USB-compliant product.

NOTE: IC1 must be driven by V_{DD} with a 5-V tolerant input.

 $C_1,\,C_2,\,C_3,\,C_4,\,C_7,\,C_8\!\!:\,10\;\mu\text{F}$

C5, C6: 10 pF to 33 pF (depending on crystal resonator)

 C_9 , C_{10} , C_{11} , C_{12} : The capacitance may vary depending on design.

Operating Environment

For current information on the PCM2903B operating environment, see the *Updated Operating Environments for PCM270X, PCM290X Applications* application report, SLAA374.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp	Op Temp (°C)	Device Marking (4/5)	Samples
PCM2903BDB	NRND	SSOP	DB	28	50	Green (RoHS & no Sb/Br)	NIPDAU	Level-1-260C-UNLIM	-25 to 85	PCM2903B	
PCM2903BDBR	NRND	SSOP	DB	28	2000	Green (RoHS & no Sb/Br)	NIPDAU	Level-1-260C-UNLIM	-25 to 85	PCM2903B	

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

ROHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

⁽³⁾ MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

⁽⁴⁾ There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

⁽⁵⁾ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer:The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
