

CA3080

2MHz, Operational Transconductance Amplifier (OTA)

The CA3080 and CA3080A types are Gatable-Gain Blocks which utilize the unique operational-transconductance-amplifier (OTA) concept described in Application Note AN6668, "Applications of the CA3080 and CA3080A High-Performance Operational Transconductance Amplifiers".

The CA3080 and CA3080A types have differential input and a single-ended, push-pull, class A output. In addition, these types have an amplifier bias input which may be used either for gating or for linear gain control. These types also have a high output impedance and their transconductance (g_m) is directly proportional to the amplifier bias current (I_{ABC}).

The CA3080 and CA3080A types are notable for their excellent slew rate (50V/ μ s), which makes them especially useful for multiplexer and fast unity-gain voltage followers. These types are especially applicable for multiplexer applications because power is consumed only when the devices are in the "ON" channel state.

The CA3080A's characteristics are specifically controlled for applications such as sample-hold, gain-control, multiplexing, etc.

Rochester Electronics Manufactured Components

Rochester branded components are manufactured using either die/wafers purchased from the original suppliers or Rochester wafers recreated from the original IP. All re-creations are done with the approval of the Original Component Manufacturer (OCM).

Parts are tested using original factory test programs or Rochester developed test solutions to guarantee product meets or exceeds the OCM data sheet.

Quality Overview

- ISO-9001
- AS9120 certification
- Qualified Manufacturers List (QML) MIL-PRF-35835
 - Class Q Military
 - Class V Space Level
- Qualified Suppliers List of Distributors (QSLD)
 - Rochester is a critical supplier to DLA and meets all industry and DLA standards.

Rochester Electronics, LLC is committed to supplying products that satisfy customer expectations for quality and are equal to those originally supplied by industry manufacturers.

The original manufacturer's datasheet accompanying this document reflects the performance and specifications of the Rochester manufactured version of this device. Rochester Electronics guarantees the performance of its semiconductor products to the original OCM specifications. 'Typical' values are for reference purposes only. Certain minimum or maximum ratings may be based on product characterization, design, simulation, or sample testing.

FOR REFERENCE ONLY

November 1996

Features

- Slew Rate (Unity Gain, Compensated) 50V/μs
- Adjustable Power Consumption 10μW to 30μW
- Flexible Supply Voltage Range ±2V to ±15V
- Fully Adjustable Gain 0 to $g_M R_L$ Limit
- Tight g_M Spread:
 - CA3080 2:1
 - CA3080A 1.6:1
- Extended g_M Linearity 3 Decades

Applications

- Sample and Hold
- Multiplier
- Multiplexer
- Comparator
- Voltage Follower

Ordering Information

Description

The CA3080 and CA3080A types are Gatable-Gain Blocks which utilize the unique operational-transconductance-amplifier (OTA) concept described in Application Note AN6668, "Applications of the CA3080 and CA3080A High-Performance Operational Transconductance Amplifiers".

The CA3080 and CA3080A types have differential input and a single-ended, push-pull, class A output. In addition, these types have an amplifier bias input which may be used either for gating or for linear gain control. These types also have a high output impedance and their transconductance (g_M) is directly proportional to the amplifier bias current (I_{ABC}).

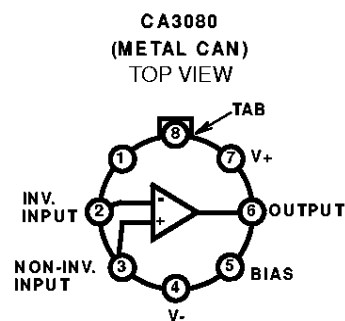

The CA3080 and CA3080A types are notable for their excellent slew rate (50V/μs), which makes them especially useful for multiplexer and fast unity-gain voltage followers. These types are especially applicable for multiplexer applications because power is consumed only when the devices are in the "ON" channel state.

The CA3080A's characteristics are specifically controlled for applications such as sample-hold, gain-control, multiplexing, etc.

Pinouts

NOTE: Pin 4 is connected to case.

CA3080, CA3080A

Absolute Maximum Ratings

Supply Voltage (Between V+ and V- Terminal).....	36V
Differential Input Voltage.....	5V
Input Voltage.....	V+ to V-
Input Signal Current.....	1mA
Amplifier Bias Current (I_{ABC}).....	2mA
Output Short Circuit Duration (Note 1).....	No Limitation

Operating Conditions

Temperature Range	
CA3080.....	0°C to 70°C
CA3080A.....	-55°C to 125°C

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

NOTES:

1. Short circuit may be applied to ground or to either supply.
2. θ_{JA} is measured with the component mounted on an evaluation PC board in free air.

Thermal Information

Thermal Resistance (Typical, Note 2)	θ_{JA} (°C/W)	θ_{JC} (°C/W)
PDIP Package.....	130	N/A
SOIC Package.....	170	N/A
Metal Can Package.....	200	120
Maximum Junction Temperature (Metal Can).....	175°C	
Maximum Junction Temperature (Plastic Package).....	150°C	
Maximum Storage Temperature Range.....	-65°C to 150°C	
Maximum Lead Temperature (Soldering 10s).....	300°C (SOIC - Lead Tips Only)	

Electrical Specifications For Equipment Design, $V_{SUPPLY} = \pm 15V$, Unless Otherwise Specified
