## Datasheet

## PART NUMBER

## 54LS03BCA-ROCS

## Rochester Electronics Manufactured Components

Rochester branded components are manufactured using either die/wafers purchased from the original suppliers or Rochester wafers recreated from the original IP. All re-creations are done with the approval of the Original Component Manufacturer. (OCM)

Parts are tested using original factory test programs or Rochester developed test solutions to guarantee product meets or exceeds the OCM data sheet.

## Quality Overview

- ISO-9001
- AS9120 certification
- Qualified Manufacturers List (QML) MIL-PRF-38535
- Class Q Military
- Class V Space Level

Qualified Suppliers List of Distributors (QSLD)

- Rochester is a critical supplier to DLA and meets all industry and DLA standards.
Rochester Electronics, LLC is committed to supplying products that satisfy customer expectations for quality and are equal to those originally supplied by industry manufacturers.

The original manufacturer's datasheet accompanying this document reflects the performance and specifications of the Rochester manufactured version of this device. Rochester Electronics guarantees the performance of its semiconductor products to the original OCM specifications. 'Typical' values are for reference purposes only. Certain minimum or maximum ratings may be based on product characterization, design, simulation, or sample testing.

## FOR REFERENCE ONLY

# MILITARY SPECIFICATION <br> MICROCIRCUITS, DIGITAL, BIPOLAR LOW-POWER SCHOTTKY TTL, AND GATES, MONOLITHIC SILICON 

Inactive for new design after 18 April 1997.
This specification is approved for use by all Departments and Agencies of the Department of Defense.

## 1. SCOPE

1.1 Scope. This specification covers the detail requirements for monolithic silicon, low-power Schottky TTL, positive NAND logic gate microcircuits. Two product assurance classes and a choice of case outlines and lead finishes are provided for each type and are reflected in the complete part number. For this product, the requirements of MIL-M-38510 have been superseded by MIL-PRF-38535, (see 6.3).
1.2 Part number. The part number shall be in accordance with MIL-PRF-38535, and as specified herein.
1.2.1 Device types. The device types shall be as follows:

Device type
01
02
03
04
05
06
07
08
09

Circuit
Quadruple, 2-input positive NAND gate
Quadruple, 2-input positive NAND gate (open collector output)
Hex, 1 -input inverter gate
Hex, 1 -input inverter gate (open collector output)
Triple, 3-input positive NAND gate
Triple, 3-input positive NAND gate (open collector output)
Dual, 4-input positive NAND gate
Dual, 4-input positive NAND gate (open collector output)
Single, 8-input positive NAND gate
1.2.2 Device class. The device class shall be the product assurance level as defined in MIL-PRF-38535.
1.2.3 Case outlines. The case outlines shall be as designated in MIL-STD-1835 and as follows:

| Outline letter | Descriptive designator | Terminals | Package style |
| :---: | :---: | :---: | :---: |
| A | GDFP5-F14 or CDFP6-F14 | 14 | Flat pack |
| B | GDFP4-14 | 14 | Flat pack |
| C | GDIP1-T14 or CDIP2-T14 | 14 | Dual-in-line |
| D | GDFP1-F14 or CDFP2-F14 | 14 | Flat pack |
| X | CQCC2-N20 | 20 | Square leadless chip carrier |
| 2 | CQCC1-N20 | 20 | Square leadless chip carrier |

Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be of use in improving this document should be addressed to: Commander, Defense Supply Center Columbus, ATTN: DSCC-VAS, 3990 East Broad St., Columbus, OH 43216-5000, by using the self addressed Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter.
1.3 Absolute maximum ratings.

| Supply voltage range | -0.5 V to +7.0 V |
| :---: | :---: |
| Input voltage range | -1.5 V at -18 mA to +5.5 V |
| Storage temperature range | $-65^{\circ}$ to $+150^{\circ} \mathrm{C}$ |
| Maximum power dissipation, ( $\mathrm{PD}^{\text {) } 1 /}$ | 6.1 mW dc |
| Lead temperature (soldering, 10 seconds). | $300^{\circ} \mathrm{C}$ |
| Thermal resistance, junction to case ( $\theta_{\mathrm{Jc}}$ ): |  |
| Cases A, B, C, D, X, and 2 ............ | (See MIL-STD-1835) |
| Junction temperature ( $\mathrm{T}_{\mathrm{J}}$ ) | $175{ }^{\circ} \mathrm{C}$ |

1.4 Recommended operating conditions.

2. APPLICABLE DOCUMENTS

### 2.1 Government documents.

2.1.1 Specifications and Standards. The following specifications and standards form a part of this specification to the extent specified herein. Unless otherwise specified, the issues of these documents shall be those listed in the issue of the Departments of Defense Index of Specifications and Standards (DODISS) and supplement thereto, cited in the solicitation.

## SPECIFICATION

DEPARTMENT OF DEFENSE
MIL-PRF-38535 - Integrated Circuits (Microcircuits) Manufacturing, General Specification for.

## STANDARDS

DEPARTMENT OF DEFENSE
MIL-STD-883 - Test Method Standard for Microelectronics.
MIL-STD-1835 - Interface Standard Electronic Component Case Outlines
(Unless otherwise indicated, copies of the above specifications and standards are available from the Standardization Document Order Desk, 700 Robbins Avenue, Building 4D, Philadelphia, PA 19111-5094.)
2.2 Order of precedence. In the event of a conflict between the text of this specification and the references cited herein, the text of this document takes precedence. Nothing in this document, however, supersedes applicable laws and regulations unless a specific exemption has been obtained.

[^0]
## MIL-M-38510/300E

## 3. REQUIREMENTS

3.1 Qualification. Microcircuits furnished under this specification shall be products that are manufactured by a manufacturer authorized by the qualifying activity for listing on the applicable qualified manufacturers list before contract award (see 4.3 and 6.4).
3.2 Item requirements. The individual item requirements shall be in accordance with MIL-PRF-38535 and as specified herein or as modified in the device manufacturer's Quality Management (QM) plan. The modification in the QM plan shall not affect the form, fit, or function as described herein.
3.3 Design, construction, and physical dimensions. The design, construction, and physical dimensions shall be as specified in MIL-PRF-38535 and herein.
3.3.1 Logic diagrams and terminal connections. The logic diagrams and terminal connections shall be as specified on figure 1.
3.3.2 Truth tables. The truth tables and logic equations shall be as specified on figure 2.
3.3.3 Schematic circuits. The schematic circuits shall be maintained by the manufacturer and made available to the qualifying activity and the preparing activity (DSCC-VAS) upon request.
3.3.4 Case outlines. The case outlines shall be as specified in 1.2.3.
3.4 Lead material and finish. The lead material and finish shall be in accordance with MIL-PRF-38535 (see 6.6).
3.5 Electrical performance characteristics. The electrical performance characteristics are as specified in table I, and apply over the full recommended case operating temperature range, unless otherwise specified.
3.5.1 Post-irradiation performance characteristics. The electrical performance characteristics of radiation hardness assured devices following exposure to the designated radiation levels are as specified in table III, subgroups 1 and 9 and apply at an ambient temperature of $+25^{\circ} \mathrm{C}$.
3.6 Electrical test requirements. The electrical test requirements for each device class shall be the subgroups specified in table II. The electrical tests for each subgroup are described in table III.
3.7 Marking. Marking shall be in accordance with MIL-PRF-38535.
3.8 Microcircuit group assignment. The devices covered by this specification shall be in microcircuit group number 8 (see MIL-PRF-38535, appendix A).

## 4. VERIFICATION

4.1 Sampling and inspection. Sampling and inspection procedures shall be in accordance with MIL-PRF-38535 or as modified in the device manufacturer's Quality Management (QM) plan. The modification in the QM plan shall not effect the form, fit, or function as described herein.
4.2 Screening. Screening shall be in accordance with MIL-PRF-38535 and shall be conducted on all devices prior to qualification and quality conformance inspection. The following additional criteria shall apply:
a. The burn-in test duration, test condition, and test temperature, or approved alternatives shall be as specified in the device manufacturer's QM plan in accordance with MIL-PRF-38535. The burn-in test circuit shall be maintained under document control by the device manufacturer's Technology Review Board (TRB) in accordance with MIL-PRF-38535 and shall be made available to the acquiring or preparing activity upon request. The test circuit shall specify the inputs, outputs, biases, and power dissipation, as applicable, in accordance with the intent specified in test method 1015 of MIL-STD-883.
b. Interim and final electrical test parameters shall be as specified in table II, except interim electrical parameters test prior to burn-in is optional at the discretion of the manufacturer.
c. Additional screening for space level product shall be as specified in MIL-PRF-38535, appendix B.

## MIL-M-38510/300E

## MIL-M-38510/300E

TABLE II. Electrical test requirements.

| MIL-PRF-38535 test requirements | Subgroups (see table III) |  |
| :--- | :--- | :---: |
|  | Class S <br> devices | Class B <br> devices |
| Interim electrical parameters | 1 | 1 |
| Final electrical test parameters | $1^{*}, 2,3,9$, | $1^{*}, 2,3,9$ |
|  | 10,11 | $1,2,3,9$, |
| Group A test requirements | $1,2,3$, | 10,11 |
| Group C end-point electrical parameters | $9,10,11$ | $1,2,3,5$ |
| Group D end-point electrical parameters | $9,10,11$ | $1,2,3$ |

*PDA applies to subgroup 1.
4.3 Qualification inspection. Qualification inspection shall be in accordance with MIL-PRF-38535.
4.4 Technology Conformance inspection (TCI). Technology conformance inspection shall be in accordance with MIL-PRF-38535 and herein for groups A, B, C, and D inspections (see 4.4.1 through 4.4.4).
4.4.1 Group A inspection. Group A inspection shall be in accordance with table III of MIL-PRF-38535 and as follows:
a. Tests shall be as specified in table II herein.
b. Subgroups $4,5,6,7$, and 8 shall be omitted.
4.4.2 Group B inspection. Group B inspection shall be in accordance with table II MIL-PRF-38535.
4.4.3 Group C inspection. Group C inspection shall be in accordance with table IV of MIL-PRF-38535 and as follows:
a. End-point electrical parameters shall be as specified in table II herein.
b. The steady-state life test duration, test condition, and test temperature, or approved alternatives shall be as specified in the device manufacturer's QM plan in accordance with MIL-PRF-38535. The burn-in test circuit shall be maintained under document control by the device manufacturer's Technology Review Board (TRB) in accordance with MIL-PRF-38535 and shall be made available to the acquiring or preparing activity upon request. The test circuit shall specify the inputs, outputs, biases, and power dissipation, as applicable, in accordance with the intent specified in test method 1005 of MIL-STD-883.
4.4.4 Group D inspection. Group D inspection shall be in accordance with table V of MIL-PRF-38535. End-point electrical parameters shall be as specified in table II herein.
4.5 Methods of inspection. Methods of inspection shall be specified and as follows:
4.5.1 Voltage and current. All voltages given are referenced to the microcircuit ground terminal. Currents given are conventional and positive when flowing into the referenced terminal.

NOTES:

1. The pulse generator has the following characteristics:
$\mathrm{t}_{1} \leq 15 \mathrm{~ns}, \mathrm{t}_{0} \leq 6 \mathrm{~ns}, \mathrm{PRR} \leq 1 \mathrm{MHz}$, duty cycle $=50 \%$ and $\mathrm{Z}_{\text {OUT }}=50 \Omega$.
2. Inputs not under test are at 2.7 V .
3. $\mathrm{C}_{\mathrm{L}}=50 \mathrm{pF} \pm 10 \%$, including scope probe, wiring, and stray capacitance.
4. $R_{L}=2 \mathrm{k} \Omega \pm 5 \%$.
5. Voltage measurements are to be made with respect to network ground terminal.

| 11 | Same tests, terminal conditions and limits as for subgroup 10, except $\mathrm{T}_{\mathrm{C}}=-55^{\circ} \mathrm{C}$. |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

TABLE III. Group A inspection for device type 05 - Continued.
Terminal conditions (pins not designated may be high $\geq 2.0 \mathrm{~V}$ or low $\leq 0.7 \mathrm{~V}$ or open).
1/ For case $X$ and 2, pins not referenced are NC.
르/ ILL limits in $\mu \mathrm{A}$ are as follows:

| Measured terminal | Min/max limits for circuit |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  | A | B | C | D | E | F |
| 1 A, 1B, 1C, | $-120 /-360$ | $-30 /-300$ | $-150 /-380$ | $-150 /-380$ | $-160 /-400$ | $-100 /-340$ |
| $2 A, 2 B, 2 C$ |  |  |  |  |  |  |
| $1 C, 2 C, 3 C$ |  |  |  |  |  |  |

3/ Ios limits for circuit $C$ are: $-20 /-100 \mathrm{~mA}$; for circuit $B$ are: $-30 /-300 \mathrm{~mA}$ : for circuits $A, D, E$, and $F:-15 /-100 \mathrm{~mA}$.

## 1/ For case $X$ and 2, pins not referenced are NC.

2/ IL limits in $\mu \mathrm{A}$ are as follows:

| Measured terminal Min/max limits for circuit      <br>  A B C D E F <br> A, B, C, D, E, F, G, H $-0 /-360$ $-30 /-300$ $-160 /-400$ $-160 /-400$ $-150 / 380$ $-160 /-400$ |
| :--- |
| 3/ Ios limits for circuit C: $-20 /-100 \mathrm{~mA}$; for circuits A, B, D, E, and F: $-15 /-100 \mathrm{~mA}$. |

[^2]
## MIL-M-38510/300E

## 5. PACKAGING

5.1 Packaging requirements. For acquisition purposes, the packaging requirements shall be as specified in the contract or order (see 6.2). When actual packaging of materiel is to be performed by DoD personnel, these personnel need to contact the responsible packaging activity to ascertain requisite packaging requirements. Packaging requirements are maintained by the Inventory Control Point's packaging activity within the Military Department of Defense Agency, or within the Military Department's System Command. Packaging data retrieval is available from the managing Military Department's or Defense Agency's automated packaging files, CD-ROM products, or by contacting the responsible packaging activity.
6. NOTES
6.1 Intended use. Microcircuits conforming to this specification are intended for original equipment design applications and logistic support of existing equipment.
6.2 Acquisition requirements. Acquisition documents should specify the following:
a. Title, number, and date of the specification.
b. Complete part number (see 1.2).
c. Requirements for delivery of one copy of the quality conformance inspection data pertinent to the device inspection lot to be supplied with each shipment by the device manufacturer, if applicable.
d. Requirements for certificate of compliance, if applicable.
e. Requirements for notification of change of product or process to contracting activity in addition to notification to the qualifying activity, if applicable.
f. Requirements for failure analysis (including required test condition of method 5003 of MIL-STD-883), corrective action, and reporting of results, if applicable.
g. Requirements for product assurance options.
h. Requirements for special carriers, lead lengths, or lead forming, if applicable. These requirements shall not affect the part number. Unless otherwise specified, these requirements will not apply to direct purchase by or direct shipment to the Government.
j. Requirements for "JAN" marking.
6.3 Superseding information. The requirements of MIL-M-38510 have been superseded to take advantage of the available Qualified Manufacturer Listing (QML) system provided by MIL-PRF-38535. Previous references to MIL-M38510 in this document have been replaced by appropriate references to MIL-PRF-38535. All technical requirements now consist of this specification and MIL-PRF-38535. The MIL-M-38510 specification sheet number and PIN have been retained to avoid adversely impacting existing government logistics systems and contractor's parts lists.
6.4 Qualification. With respect to products requiring qualification, awards will be made only for products which are, at the time of award of contract, qualified for inclusion in Qualified Manufacturers List QML-38535 whether or not such products have actually been so listed by that date. The attention of the contractors is called to these requirements, and manufacturers are urged to arrange to have the products that they propose to offer to the Federal Government tested for qualification in order that they may be eligible to be awarded contracts or purchase orders for the products covered by this specification. Information pertaining to qualification of products may be obtained from DSCC-VQ, 3990 E. Broad Street, Columbus, Ohio 43123-1199.

## MIL-M-38510/300E

6.5 Abbreviations, symbols, and definitions. The abbreviations, symbols, and definitions used herein are defined in MIL-PRF-38535, MIL-HDBK-1331, and as follows:
GND Ground zero voltage potential
$I_{\text {IN }}$ Current flowing into an input terminal
VIC $\qquad$ Input clamp voltage
VIN Voltage level at an input terminal
6.6 Logistic support. Lead materials and finishes (see 3.4) are interchangeable. Unless otherwise specified, microcircuits acquired for Government logistic support will be acquired to device class B (see 1.2.2), lead material and finish A (see 3.4). Longer length leads and lead forming shall not affect the part number.
6.7 Substitutability. The cross-reference information below is presented for the convenience of users.

Microcircuits covered by this specification will functionally replace the listed generic-industry type. Generic-industry microcircuit types may not have equivalent operational performance characteristics across military temperature ranges or reliability factors equivalent to MIL-M-38510 device types and may have slight physical variations in relation to case size. The presence of this information shall not be deemed as permitting substitution of generic-industry types for MIL-M-38510 types or as a waiver of any of the provisions of MIL-PRF-38535.

## STANDARDIZATION DOCUMENT IMPROVEMENT PROPOSAL

## INSTRUCTIONS

1. The preparing activity must complete blocks $1,2,3$, and 8 . In block 1 , both the document number and revision letter should be given.
2. The submitter of this form must complete blocks $4,5,6$, and 7 , and send to preparing activity.
3. The preparing activity must provide a reply within 30 days from receipt of the form.

NOTE: This form may not be used to request copies of documents, nor to request waivers, or clarification of requirements on current contracts. Comments submitted on this form do not constitute or imply authorization to waive any portion of the referenced document(s) or to amend contractual requirements.

[^0]:    1/ Must withstand the added $\mathrm{P}_{\mathrm{D}}$ due to short-circuit test (e.g., los).
    2/ Maximum junction temperature ( $\mathrm{T}_{\mathrm{J}}$ ) may be increased during the burn-in screening and steady-state life test. However, such temperatures should not be used under normal operating conditions.

[^1]:    1/ Not more than one output should be shorted at a time.

[^2]:    3/ Ios limits for circuit C: -20/-100 mA; for circuits A, B, D, E, and F: -15/-100 mA
