description

The SN75LVDS88B (LVDS panel timing controller) integrates a Flatlink™ signal interface with a TFT LCD timing controller. It resides in the LCD panel and provides interface between the graphic controller and a TFT LCD panel.

The SN75LVDS88B accepts host data through 3 pairs of inputs (18-bits) making up the LVDS bus, which is a low-EMI high-throughput interface. SN75LVDS88B then reformats the received image data into a specific data format and synchronous timing suitable for driving LCD panel column and row drivers. This device supports XGA resolution.

The SN75LVDS88B is easily configured by several selection terminals and is equipped with default timing specifications to support mainstream gate and source drivers on the market.

Terminal Functions

TERMINAL NAME	TERMINAL NO.	I/O	DESCRIPTION
A0M/A0P	81,82	I	Flatlink 1st data pair
A1M/A1P	83, 84	I	Flatlink 2nd data pair
A2M/A2P	85, 86	I	Flatlink 3rd data pair
CLK	44	O	CD bus clock
$\overline{\text{CLK}}$	13	O	CD bus clock (180 degree out of phase)
CLKM/CLKP	87, 88	I	Flatlink clock pair
CPV	3	O	Gate driver clock
DBS	97	I	Data bus sequence
EPOL	42	O	Even RGB data stream polarity indicator
ER0..ER5 (EB0)..(EB5)	24, 22, 21, 19, 18, 16	O	Even red (blue) data bus, controlled by DBS Pin, 0 = red, 1 = blue
(ER0)..(ER5) EB0..EB5	41,39,38 36,35,33	O	Even blue (red) data bus, controlled by DBS Pin, 0 = blue, 1 = red
GND1	91	P	PLL ground for LVDS
MODE1	99	I	Default timing selection pin 1
MODE2	1	I	Default timing selection pin 2
NC	76, 77, 89, 90, 98	NC	NC terminals
OE1, OE2	6, 10	O	Gate driver output enable
OG0..OG5	63, 61, 60, 58, 57, 55	O	Odd green data bus
OPOL	74	O	Odd RGB data stream polarity indicator
OR0..OR5 (OB0)..(OB5)	54, 52, 51, 50, 49, 47	O	Odd red (blue) data bus, controlled by DBS Pin, 0 = red, 1 = blue
(OR0)..(OR5) OB0..OB5	72, 70, 69 67, 66, 64	O	Odd blue (red) data bus, controlled by DBS Pin, 0 = blue, 1 = red
POLEN	95	I	Output data polarity control enable /disable
REV_E	7	O	CD line/dot inversion control signal
REV_O	9	O	CD line/dot inversion control signal (180 degree of phase)
$\overline{\text{RSTZ}}$	93	I	Reset, active low
$\overline{\text{SHTDN}}$	79	I	System shutdown control, active low
SP	46	O	Data bus starting pulse
STV	5	O	Gate driver starting pulse
TEST1, TEST2	100, 15	I	Test points†
TP1, TP2	2, 11	O	CD output control signal
VDDA	94	P	PLL power for LVDS
GNDA	92	P	Analog ground for LVDS
VDDD	78	P	Digital power supply for LVDS
GNDD	80	P	Digital power ground for LVDS
VDD	8,71,75	P	Digital power
VSS	4,73,96	P	Digital ground
VDDIO	14, 20, 28, 34, 40, 45, 53, 59, 65	P	I/O power
VSSIO	12, 17, 23, 31, 37, 43, 48, 56, 62, 68	P	I/O ground

† Terminals must be connected to ground.

options

output control

PIN NAME	PIN NO.	INTERNAL CONNECTION		DESCRIPTION
		REQUIRED	SUGGESTED	
MODE1 MODE2	99 1	Pullup Pulldown		Default timing selection pin 1 Default timing selection pin 2
POLEN	95	Pulldown		0 = Output data reverse disable 1 = Output data reverse enable
DBS	97	Pulldown		Data bus sequence 0 = normal (RGB) 1 = reverse (BGR)

NOTE: NC pin 76 is internally pulldown and NC pins 77 and 98 are internally pullup.

absolute maximum ratings over operating free-air temperature (unless otherwise noted)†

Supply voltage range, V_{CC}‡ . . . . . –0.5 V to 4 V
Voltage range at any terminal . . . . . –0.5 V to V_{CC} + 0.5 V
Continuous power dissipation . . . . . See Dissipation Rating Table
Storage temperature range, T_{stg} . . . . . –65°C to 150°C
Electrostatic discharge: Class 3 A . . . . . 4 kV
Class 2 B . . . . . 200 V
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds . . . . . 260°C

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
‡ All voltage values are with respect to the GND terminals unless otherwise noted.

DISSIPATION RATING TABLE

PACKAGE	$T_A \le 25°C$ POWER RATING	OPERATING FACTOR§ ABOVE $T_A = 25°C$	$T_A = 70°C$ POWER RATING
PFD	1.548 W	12 mW	1.012 W
RDD	1.089 W	8.4 mW	0.712 W

§ This is the inverse of the junction-to-ambient thermal resistance when board-mounted and with no air flow.

recommended operating conditions

		MIN	NOM	MAX	UNIT
Supply voltage, V_{CC}		3	3.3	3.6	V
High-level input voltage, V_{IH}	$\overline{SHTDN}$	2			V
Low-level input voltage, V_{IL}	$\overline{SHTDN}$			0.8	V
Magnitude of differential input voltage, $\|V_{ID}\|$		0.1		0.6	V
Common–mode input voltage, V_{IC}		$\frac{\|V_{ID}\|}{2}$		$2.4 - \frac{\|V_{ID}\|}{2}$	V
Operating free-air temperature, T_A		0		70	°C

electrical characteristics over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP†	MAX	UNIT
V_{IT+}	Positive-going differential input voltage threshold				100	mV
$V_{IT–}$	Negative-going differential input voltage threshold		–100			mV
I_{CC}	Current (average)	Disabled, all inputs to ground			360	µA
		Enabled, AnP at 1 V and AnM at 1.4 V, t_C = 15.38 ns		80		mA
		Enabled, C_L = 8 pF, Grayscale pattern , t_C = 15.38 ns		100		mA
		Enabled, C_L = 8 pF, Worst-case pattern, t_C = 15.38 ns		120		mA
I_{IH}	High-level input current ($\overline{SHTDN}$)	$V_{IH} = V_{CC}$			±20	µA
I_{IL}	Low-level input current ($\overline{SHTDN}$)	V_{IL} = 0 V			±20	µA
I_{IN}	Input current (A inputs)	0 V ≤ V_I ≤ 2.4 V			±20	µA
I_{OZ}	High-impedance output current	V_O = 0 V or V_{CC}			±10	µA

† All typical values are at V_{CC} = 3.3 V, T_A = 25°C.
‡ The algebraic convention, in which the less-positive (more-negative) limit is designated minimum, is used in this data sheet for the negative-going input voltage threshold only.

timing requirements

		MIN	TYP	MAX	UNIT
t_c§	Input clock period	14.7		31.25	ns
t_{su}/t_h	Input set up or hold time	550			ps

§ t_c is defined as the mean duration of a minimum of 32,000 clock periods.

output buffer rating

	MIN	TYP	MAX	UNIT
STV, SP		4		mA
CLK, $\overline{CLK}$		8		mA
Data bus and remaining outputs		4		mA

switching characteristics

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
t_{dr1}	Input clock rising to output clock rising delay	C_L = 80 pF	10		40	ns
t_{df1}	Input clock rising to output clock falling delay		10		40	ns
t_{su1}	Data setup time, E/O RGB to CLK↑	C_L = 80 pF	10		20	ns
t_{h1}	Data hold time, CLK↑ to E/O RGB		10		20	ns
$t_{(RSKM)}$	Receiver input skew margin, See Note 1	t_c = 15.38 ns (±0.2%), |Input clock jitter| < 50 ps, See Note 2	550	700		ps
t_{en}	Enable time, $\overline{SHTDN}$ to phase lock			1		ms
t_{dis}	Disable time, $\overline{SHTDN}$ to off state			250		ns
t_{su2}	SP setup time	C_{sp} = 10 pF	10		20	ns
t_{h2}	SP pulse hold time		10		20	ns

NOTES: 1. t_{RSKM} is the timing margin available to allocate to the transmitter and interconnection skews and clock jitter. The value of this parameter at clock periods other than 15.38 ns can be calculated from $t_{RSKM} = \frac{t_c}{14} - 300$ ps.

2. |Input clock jitter| is the magnitude of the change in the input clock period.

functional description

Flatlink

The core of the Flatlink is TIs original 86A LVDS receiver, which has three data channels for the 18-bit color plus one clock channel.

data alignment

The data alignment block supports dual bus, dual port column driver configuration. When interfacing a 2-port column driver, the controller arranges pixels in odd and even order, then distributes them to odd and even buses and each connects to either of the driver ports. Under this setup, the controller outputs one clock, one or two data polarities (depends on driver), and one inverse (support line inversion) signal to the drivers.

output formatting

The output formatting provides several functions to reduce EMI, noise, and timing delay arrangement. These functions are controllable through some optional pins. See the registers and options section for reference.

- **Reverse Polarity Generation**
  When enabled, this function generates polarity indication signals. This occurs when the number of transitions in the output data bus exceeds 18-bits compared to the previous output under normal polarity. The polarity signal will be active and the output will be the opposite polarity to reduce transition.
- **Line Inversion**
  When enabled, the REV_O and REV_E terminals will output the same line inversion control signals but in opposite polarities.

timing control

- **Horizontal Starting pulses**
  ESP and OSP terminals are used as the horizontal starting pulses output pins. Their outputs are one HCLK period ahead of the RGB data stream
- **Horizontal Clock**
  ECLK and OCLK terminals are responsible for the clock pulses, based on the XGA resolution when its frequency is at 32.5 MHz.
- **CD Data Latch Pulse**
  TP1 and TP2 provide the column driver input latch and output enable signals.
- **Gate Driver Clock**
  The CPV terminal output the clock pulses to the gate drivers as the horizontal sync timing in its CRT counter part.
- **Gate Driver Starting Pulse**
  The vertical starting pulse automatically generates at the start of every frame.
- **Gate Driver Output Enable**
  The OE1 and OE2 terminals provide the gate output enable signals.

PARAMETER MEASUREMENT INFORMATION

functional description (continued)

vertical/horizontal reference generator

This block provides vertical and horizontal reference points for timing control. Vsync, Hsync, and ENAB signals, along with the auto detection function, determine when the video from the host is valid.

power-up procedure

Due to the uncertainty of registers and counters in the driver, SN75LVDS88B combines the input from both reset and Vsync to blank the output and simultaneously resets the content of drivers (see Figure 3).

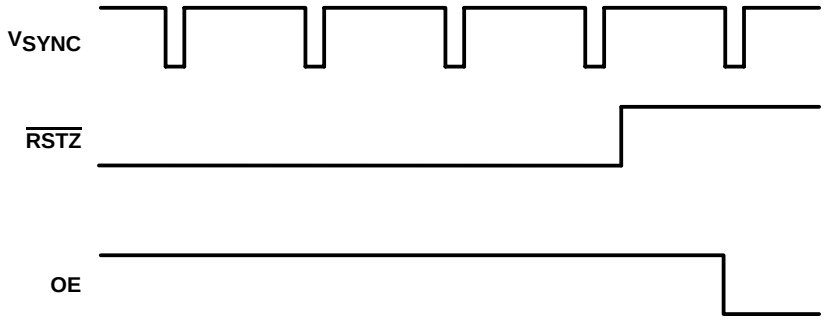

Figure 3. Reset Waveform

It is recommended that the following circuit be used to ensure the device is reset for more than 5 ms after power up.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish	MSL Peak Temp (3)
SN75LVDS88BPFD	ACTIVE	HTQFP	PFD	100	90	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-3-260C-168 HR
SN75LVDS88BRDD	OBSOLETE	HVQFP	RDD	100		TBD	Call TI	Call TI

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS) or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.
