

RF LDMOS Wideband Integrated Power Amplifier

The MW4IC001N wideband integrated circuit is designed for use as a distortion signature device in analog predistortion systems. It uses Freescale's newest High Voltage (26 to 28 Volts) LDMOS IC technology. Its wideband On Chip design makes it usable from 800 MHz to 2170 MHz. The linearity performances cover all modulations for cellular applications: GSM EDGE, TDMA, CDMA and W-CDMA.

- Typical CW Performance at 2170 MHz, 28 Volts, $I_{DQ} = 12$ mA
 Output Power — 900 mW PEP
 Power Gain — 13 dB
 Efficiency — 38%

Features

- High Gain, High Efficiency and High Linearity
- Designed for Maximum Gain and Insertion Phase Flatness
- Excellent Thermal Stability
- Characterized with Series Equivalent Large-Signal Impedance Parameters
- N Suffix Indicates Lead-Free Terminations. RoHS Compliant.
- In Tape and Reel. R4 Suffix = 100 Units per 12 mm, 7 inch Reel.
