## PRODUCT DESCRIPTION

The AWS5533 is a single pole, three throw (SP3T) RF switch developed for CDMA systems. Manufactured in ANADIGICS's state-of-the-art pHEMT process, the device uses patent-pending circuit
topologies to provide low insertion loss, high port-toport isolation, and high linearity needed to enhance the performance of CDMA radios. The AWS5533 is offered in a 12-lead $3 \mathrm{~mm} \times 3 \mathrm{~mm} \times 1 \mathrm{~mm}$ MLF package.

## ELECTRICAL CHARACTERISTICS

Table 2: Absolute Minimum and Maximum Ratings

| PARAMETER | MIN | MAX | UNIT |
| :--- | :---: | :---: | :---: |
| Control Voltages $\left(\mathrm{V}_{1}, \mathrm{~V}_{2}, \mathrm{~V}_{3}\right)$ | - | +10.0 | V |
| RF Input Power $\left(\mathrm{P}_{\text {IN }}\right)^{(1)}$ | - | 10 | W |
| Storage Temperature (TsT6) | -65 | +150 | ${ }^{\circ} \mathrm{C}$ |

Stresses in excess of the absolute ratings may cause permanent damage. Functional operation is not implied under these conditions. Exposure to absolute ratings for extended periods of time may adversely affect reliability.

Notes:
(1) Tested in conformance with JEDEC specification JESD22-C101-A
(2) A CDM ESD threshold of this voltage classifies the device as a Class IV component per JEDEC JESD22-C101-A
(3) Tested in conformance with ESD/EOS Society specification STM5.1-2001
(4) A HBM ESD threshold at these voltages classifies the device as a Class 1A component per ESD/EOS Society Specification STM5.1-2001
(5) This test was done in conformance with ESD/EOS Society HBM specification STM5.1-2001. 3000 ESD strikes were applied using multiple groups of 100 strikes each where the interval between strikes within a group is 1 second and the interval between groups is 30 seconds.
(6) This voltage rating REQUIRES the use of an inductor as an RF choke as defined in Note \#3 in the application circuit information. This rating has been tested with inductor values of 47 nH and 100 nH .

## AWS5533

## APPLICATION INFORMATION

## Circuit Applications

External component requirements for the AWS5533 are shown in Figure 8. Application details are listed in the following notes:

1. Cb are DC blocking capacitors external to the device. A value of 100 pF is sufficient for operation to 500 MHz . The values may be tailored to provide specific electrical responses.
2. The RF Ground connections should be kept as short as possible and tied directly to a good RF ground for best broadband performance.
3. Lesd provides a means to increase the ESD protection on a specific RF port, typically the port attached to the antenna. By using Lesd as an RF choke on an RF port, an ESD protection to $\pm 12 \mathrm{kV}$ contact discharge has been demonstrated.
