

January 1997

**Serial I/O Filter**

### Features

- 45MHz Clock Rate
- 256 Tap Programmable FIR Filter
- 24-Bit Data, 32-Bit Coefficients
- Cascade of up to 5 Half Band Filters
- Decimation from 1 to 256
- Two Pin Interface for Down Conversion by  $F_S/4$
- Multiplier for Mixing or Scaling Input with an External Source
- Serial I/O Compatible with Most DSP Microprocessors

### Applications

- Low Cost FIR Filter
- Filter Co-Processor
- Digital Tuner

### Ordering Information

| PART NUMBER   | TEMP. RANGE (°C) | PACKAGE    | PKG. NO. |
|---------------|------------------|------------|----------|
| HSP43124PC-45 | 0 to 70          | 28 Ld PDIP | E28.6    |
| HSP43124PC-33 | 0 to 70          | 28 Ld PDIP | E28.6    |
| HSP43124SC-45 | 0 to 70          | 28 Ld SOIC | M28.3    |
| HSP43124SC-33 | 0 to 70          | 28 Ld SOIC | M28.3    |
| HSP43124SI-40 | -40 to 85        | 28 Ld SOIC | M28.3    |

### Description

The Serial I/O Filter is a high performance filter engine that is ideal for off loading the burden of filter processing from a DSP microprocessor. It supports a variety of multistage filter configurations based on a user programmable filter and fixed coefficient halfband filters. These configurations include a programmable FIR filter of up to 256 taps, a cascade of from one to five halfband filters, or a cascade of halfband filters followed by a programmable FIR. The half band filters each decimate by a factor of two, and the FIR filter decimates from one to eight. When all six filters are selected, a maximum decimation of 256 is provided.

For digital tuning applications, a separate multiplier is provided which allows the incoming data stream to be multiplied, or mixed, by a user supplied mix factor. A two pin interface is provided for serially loading the mix factor from an external source or selecting the mix factor from an on-board ROM. The on-board ROM contains samples of a sinusoid capable of spectrally shifting the input data by one quarter of the sample rate,  $F_S/4$ . This allows the chip to function as a digital down converter when the filter stages are configured as a low-pass filter.

The serial interface for input and output data is compatible with the serial ports of common DSP microprocessors. Coefficients and configuration data are loaded over a bidirectional eight bit interface.
