

CD4034B Types

CMOS 8-Stage Static Bidirectional Parallel/Serial Input/Output Bus Register

High-Voltage Types (20-Volt Rating)

The RCA-CD4034B is a static eight-stage parallel-or serial-input parallel-output register. It can be used to:

1) bidirectionally transfer parallel information between two buses, 2) convert serial data to parallel form and direct the parallel data to either of two buses, 3) store (recirculate) parallel data, or 4) accept parallel data from either of two buses and convert that data to serial form. Inputs that control the operations include a single-phase CLOCK (CL), A DATA ENABLE (AE), ASYNCHRO-NOUS/SYNCHRONOUS (A/S), A-BUS-TO-B-BUS/B-BUS-TO-A-BUS (A/B), and PARALLEL/SERIAL (P/S).

Data inputs include 16 bidirectional parallel data lines of which the eight A data lines are inputs (3-state outputs) and the B data lines are outputs (inputs) depending on the signal level on the A/B input. In addition, an input for SERIAL DATA is also provided.

All register stages are D-type master-slave flip-flops with separate master and slave clock inputs generated internally to allow synchronous or asynchronous data transfer from master to slave. Isolation from external noise and the effects of loading is provided by output buffering.

PARALLEL OPERATION

A high P/S input signal allows data transfer into the register via the parallel data lines synchronously with the positive transition of the clock provided the A/S input is low. If the A/S input is high the transfer is independent of the clock. The direction of data flow is controlled by the A/B input. When this signal is high the A data lines are inputs (and B data lines are outputs); a low A/B signal reverses the direction of data flow.

The AE input is an additional feature which allows many registers to feed data to a common bus. The A DATA lines are enabled only when this signal is high.

Data storage through recirculation of data in each register stage is accomplished by making the A/B signal high and the AE signal low.

Applications:

- Parallel Input/Parallel Output, Parallel Input/Serial Output, Serial Input/Parallel Output, Serial Input/Serial Output Register
- Shift right/shift left register
- Shift right/shift left with parallel loading
- Address register
- Buffer register
- Bus system register with enable parallel lines at bus side
- Double bus register system
- Up-Down Johnson or ring counter
- Pseudo-random code generators
- Sample and hold register (storage, counting, display)
- Frequency and phase comparator

SERIAL OPERATION

A low P/S signal allows serial data to transfer into the register synchronously with the positive transition of the clock. The A/S input is internally disabled when the register is in the serial mode (asynchronous serial operation is not allowed).

The serial data appears as output data on either the B lines (when A/B is high) or the A lines (when A/B is low and the AE signal is high).

Register expansion can be accomplished by simply cascading CD4034B packages.

The CD4034B types are supplied in 24-lead dual-in-line ceramic packages (D and F suffixes), 24-lead dual-in-line plastic packages (E suffix), 24-lead ceramic flat packages (K suffix), and in chip form (H suffix).

MAXIMUM RATINGS, Absolute-Maximum Values:

| | |
|--|--|
| DC SUPPLY -VOLTAGE RANGE, (V_{DD}) | -0.5 to +20 V |
| (Voltages referenced to V_{SS} Terminal) | |
| INPUT VOLTAGE RANGE, ALL INPUTS | -0.5 to $V_{DD} + 0.5$ V |
| DC INPUT CURRENT, ANY ONE INPUT | ± 10 mA |
| POWER DISSIPATION PER PACKAGE (P_D): | |
| For $T_A = -40$ to $+60^\circ\text{C}$ (PACKAGE TYPE E) | 500 mW |
| For $T_A = +60$ to $+85^\circ\text{C}$ (PACKAGE TYPE E) | Derate Linearly at 12 mW/ $^\circ\text{C}$ to 200 mW |
| For $T_A = -55$ to $+100^\circ\text{C}$ (PACKAGE TYPES D, F, K) | 500 mW |
| For $T_A = +100$ to $+125^\circ\text{C}$ (PACKAGE TYPES D, F, K) | Derate Linearly at 12 mW/ $^\circ\text{C}$ to 200 mW |
| DEVICE DISSIPATION PER OUTPUT TRANSISTOR | |
| For $T_A = \text{FULL PACKAGE-TEMPERATURE RANGE (All Package Types)}$ | 100 mW |
| OPERATING-TEMPERATURE RANGE (T_A): | |
| PACKAGE TYPES D, F, K, H | -55 to $+125^\circ\text{C}$ |
| PACKAGE TYPE E | -40 to $+85^\circ\text{C}$ |
| STORAGE TEMPERATURE RANGE (T_{stg}) | -65 to $+150^\circ\text{C}$ |
| LEAD TEMPERATURE (DURING SOLDERING): | |
| At distance $1/16 \pm 1/32$ inch (1.59 ± 0.79 mm) from case for 10 s max. | $+265^\circ\text{C}$ |

Features:

- Bidirectional parallel data input
- Parallel or serial inputs/parallel outputs
- Asynchronous or synchronous parallel data loading
- Parallel data-input enable on "A" data lines (3-state output)
- Data recirculation for register expansion
- Multipackage register expansion
- Fully static operation dc-to-10 MHz (typ.) at $V_{DD} = 10$ V
- Standardized, symmetrical output characteristics
- 100% tested for quiescent current at 20 V
- 5-V, 10-V, and 15-V parametric ratings
- Maximum input current of 1 μA at 18 V over full package-temperature range; 100 nA at 18 V and 25°C
- Noise margin (over full package-temperature range):
 - 1 V at $V_{DD} = 5$ V
 - 2 V at $V_{DD} = 10$ V
 - 2.5 V at $V_{DD} = 15$ V
- Meets all requirements of JEDEC Tentative Standard No. 13A, "Standard Specifications for Description of 'B' Series CMOS Devices"

CD4034B Types

RECOMMENDED OPERATING CONDITIONS at $T_A = 25^\circ\text{C}$, Except as Noted.
 For maximum reliability, nominal operating conditions should be selected so that operation is always within the following ranges:

| CHARACTERISTIC | V_{DD} (V) | LIMITS | | UNITS | |
|---|------------------------|--------|------|---------------|----|
| | | Min. | Max. | | |
| Supply-Voltage Range (For $T_A =$ Full Package-Temperature Range) | | 3 | 18 | V | |
| Data Setup Time, t_S | Serial Data to Clock | 5 | 160 | — | ns |
| | | 10 | 60 | — | |
| | | 15 | 40 | — | |
| | Parallel Data to Clock | 5 | 50 | — | ns |
| | | 10 | 30 | — | |
| | | 15 | 20 | — | |
| Clock Pulse Width, t_W | 5 | 350 | — | ns | |
| | 10 | 140 | — | | |
| | 15 | 80 | — | | |
| Clock Input Frequency, f_{CL} | 5 | — | 2 | MHz | |
| | 10 | dc | 5 | | |
| | 15 | — | 7 | | |
| Clock Input Rise or Fall Time, t_{rCL} , t_{fCL} * | 5, 10, 15 | — | 15 | μs | |

*If more than one unit is cascaded t_{rCL} should be made less than or equal to the sum of the transition time and the fixed propagation delay of the output of the driving stage for the estimated capacitive load.

Fig. 2 — Asynchronous operation propagation delay time and transition time.

* INPUT REFERS TO ANY OF THE "A" OR "B" DATA INPUTS, "A" ENABLE, SERIAL INPUT, A/B, P/S, OR A/S INPUTS

Applications

Fig. 17 — 16-bit parallel in/parallel out, parallel in/serial out, serial in/parallel out, serial in/serial out register.

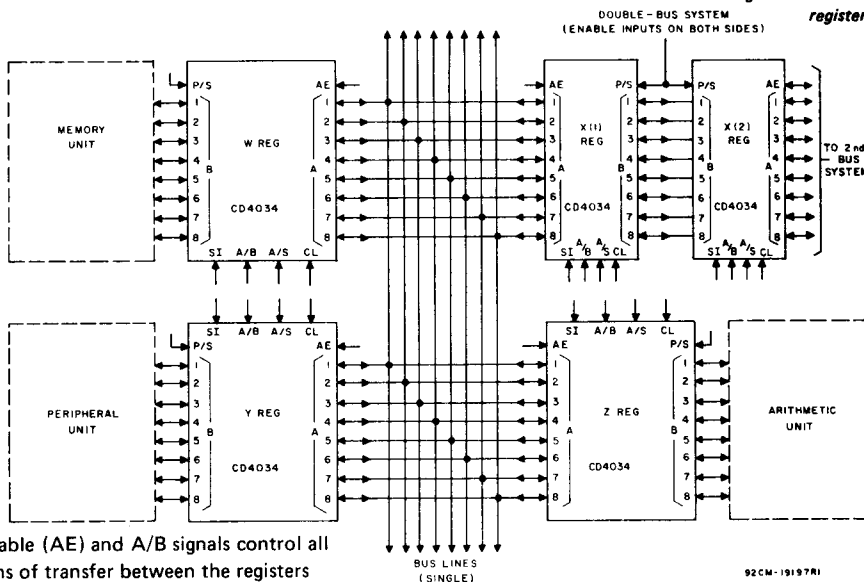

Fig. 18 — 16-bit serial in/gated parallel out register.

The "A" enable (AE) and A/B signals control all combinations of transfer between the registers and bus systems.

Fig. 19 — Single- and double-bus systems.

CD4034B Types

A "High" ("Low") on the shift Left/Shift Right input allows serial data on the Shift Left Input (Shift Right Input) to enter the register on the positive transition of the clock signal. A "high" on the "A" Enable Input disables the "A" parallel data lines on Reg. 1 and 2 and enables the "A" data lines on registers 3 and 4 and allows parallel data

into registers 1 and 2. Other logic schemes may be used in place of registers 3 and 4 for parallel loading.

When parallel inputs are not used Reg. 3 and 4 and associated logic are not required.

* Shift left input must be disabled during parallel entry.

Fig. 20 - Shift right/shift left with parallel inputs.

TERMINAL DIAGRAM

Dimensions in parentheses are in millimeters and are derived from the basic inch dimensions as indicated. Grid graduations are in mils (10⁻³ inch).

The photographs and dimensions of each CMOS chip represent a chip when it is part of the wafer. When the wafer is separated into individual chips, the angle of cleavage may vary with respect to the chip face for different chips. The actual dimensions of the isolated chip, therefore, may differ slightly from the nominal dimensions shown. The user should consider a tolerance of -3 mils to +16 mils applicable to the nominal dimensions shown.

Dimensions and pad layout for CD4034BH.
