

74LVT322373 • 74LVTH322373

Low Voltage 32-Bit Transparent Latch with 3-STATE Outputs and 25Ω Series Resistors in the Outputs

General Description

The LVT322373 and LVTH322373 contain thirty-two non-inverting latches with 3-STATE outputs and are intended for bus oriented applications. The device is byte controlled. The flip-flops appear transparent to the data when the Latch Enable (LE) is HIGH. When LE is LOW, the data that meets the setup time is latched. Data appears on the bus when the Output Enable (\overline{OE}) is LOW. When \overline{OE} is HIGH, the outputs are in a high impedance state.

The LVTH322373 data inputs include bushold, eliminating the need for external pull-up resistors to hold unused inputs.

These latches are designed for low voltage (3.3V) V_{CC} applications, but with the capability to provide a TTL interface to a 5V environment. The LVT322373 and LVTH322373 are fabricated with an advanced BiCMOS technology to achieve high speed operation similar to 5V ABT while maintaining a low power dissipation.

Features

- Input and output interface capability to systems at 5V V_{CC}
- Bushold data inputs eliminate the need for external pull-up resistors to hold unused inputs (74LVTH322373), also available without bushold feature (74LVT322373)
- Live insertion/extraction permitted
- Power Up/Down high impedance provides glitch-free bus loading
- Outputs include equivalent series resistance of 25Ω to make external termination resistors unnecessary and reduce overshoot and undershoot
- ESD performance:
 - Human-body model > 2000V
 - Machine model > 200V
 - Charged-device model > 1000V
- Packaged in plastic Fine-Pitch Ball Grid Array (FBGA)

Ordering Code:

Order Number	Package Number	Package Description
74LVT322373G (Note 1) (Note 2)	BGA96A (Preliminary)	96-Ball Fine-Pitch Ball Grid Array (FBGA), JEDEC MO-205, 5.5mm Wide
74LVTH322373G (Note 1) (Note 2)	BGA96A	96-Ball Fine-Pitch Ball Grid Array (FBGA), JEDEC MO-205, 5.5mm Wide

Note 1: Ordering Code "G" indicates Trays.

Note 2: Devices also available in Tape and Reel. Specify by appending the suffix letter "X" to the ordering code.

Functional Description

The LVT322373 and LVTH322373 contain thirty-two D-type latches with 3-STATE standard outputs. The device is byte controlled with each byte functioning identically, but independent of the other. Control pins can be shorted together to obtain full 32-bit operation. The following description applies to each byte. When the Latch Enable (LE_n) input is HIGH, data on the D_n enters the latches. In this condition the latches are transparent, i.e., a latch output will change states each time its D input changes. When LE_n is LOW, the latches store information that was present on the D inputs a setup time preceding the HIGH-to-LOW transition of LE_n . The 3-STATE standard outputs are controlled by the Output Enable (\overline{OE}_n) input. When \overline{OE}_n is LOW, the standard outputs are in the 2-state mode. When \overline{OE}_n is HIGH, the standard outputs are in the high impedance mode but this does not interfere with entering new data into the latches.

Logic Diagrams

Byte 1 (0:7)

Byte 2 (8:15)

Byte 3 (16:23)

Byte 4 (24:31)

V_{CC1} is associated with Bytes 1 and 2.

V_{CC2} is associated with Bytes 3 and 4.

Note: Please note that these diagrams are provided only for the understanding of logic operations and should not be used to estimate propagation delays.

Absolute Maximum Ratings (Note 3)					
Symbol	Parameter	Value	Conditions		Units
V _{CC}	Supply Voltage	-0.5 to +4.6			V
V _I	DC Input Voltage	-0.5 to +7.0			V
V _O	DC Output Voltage	-0.5 to +7.0	Output in 3-STATE		V
		-0.5 to +7.0	Output in HIGH or LOW State (Note 4)		
I _{IK}	DC Input Diode Current	-50	V _I < GND		mA
I _{OK}	DC Output Diode Current	-50	V _O < GND		mA
I _O	DC Output Current	64	V _O > V _{CC} Output at HIGH State		mA
		128	V _O > V _{CC} Output at LOW State		
I _{CC}	DC Supply Current per Supply Pin	±64			mA
I _{GND}	DC Ground Current per Ground Pin	±128			mA
T _{STG}	Storage Temperature	-65 to +150			°C

Recommended Operating Conditions					
Symbol	Parameter	Min	Max	Units	
V _{CC}	Supply Voltage	2.7	3.6	V	
V _I	Input Voltage	0	5.5	V	
I _{OH}	HIGH Level Output Current		-12	mA	
I _{OL}	LOW Level Output Current		12	mA	
T _A	Free-Air Operating Temperature	-40	85	°C	
Δt/ΔV	Input Edge Rate, V _{IN} = 0.8V to 2.0V, V _{CC} = 3.0V	0	10	ns/V	

Note 3: Absolute Maximum continuous ratings are those values beyond which damage to the device may occur. Exposure to these conditions or conditions beyond those indicated may adversely affect device reliability. Functional operation under absolute maximum rated conditions is not implied.

Note 4: I_O Absolute Maximum Rating must be observed.

LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

74LVTH322373

Low Voltage 32-Bit Transparent Latch with 3-STATE Outputs and 25 Ohm Series Resistors in the Outputs

Contents

General description | Features | Product status/pricing/packaging

General description

The LVT322373 and LVTH322373 contain thirty-two non-inverting latches with 3-STATE outputs and are intended for bus oriented applications. The device is byte controlled. The flip-flops appear transparent to the data when the Latch Enable (LE) is HIGH. When LE is LOW, the data that meets the setup time is latched. Data appears on the bus when the Output Enable (OE#) is LOW. When OE# is HIGH, the outputs are in a high impedance state.

The LVTH322373 data inputs include bushold, eliminating the need for external pull-up resistors to hold unused inputs.

These latches are designed for low voltage (3.3V) V_{CC} applications, but with the capability to provide a TTL interface to a 5V environment. The LVT322373 and LVTH322373 are fabricated with an advanced BiCMOS technology to achieve high speed operation similar to 5V ABT while maintaining a low power dissipation.

Print version

- Input and output interface capability to systems at 5V V_{CC}
- Bushold data inputs eliminate the need for external pull-up resistors to hold unused inputs (74LVTH322373), also available without bushold feature (74LVT322373)
- Live insertion/extraction permitted
- Power Up/Down high impedance provides glitch-free bus loading
- Outputs include equivalent series resistance of 25ohm to make external termination resistors unnecessary and reduce overshoot and undershoot
- ESD performance:

Human-body model > 2000V

Machine model > 200V

Charged-device model > 1000V

- Packaged in plastic Fine-Pitch Ball Grid Array (FBGA)
