# **Insulated Gate Bipolar Transistor**

## N-Channel Enhancement-Mode Silicon Gate

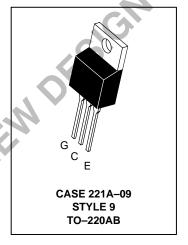

This Insulated Gate Bipolar Transistor (IGBT) uses an advanced termination scheme to provide an enhanced and reliable high voltage–blocking capability. Its new 600 V IGBT technology is specifically suited for applications requiring both a high temperature short circuit capability and a low V<sub>CE(on)</sub>. It also provides fast switching characteristics and results in efficient operation at high frequencies. This new E–series introduces an energy efficient, ESD protected, and short circuit rugged device.

- Industry Standard TO-220 Package
- High Speed: E<sub>off</sub> = 60 μJ/A typical at 125°C
- High Voltage Short Circuit Capability 10 μs minimum at 125°C, 400 V
- Low On–Voltage 2.0 V typical at 3.0 A, 125°C
- Robust High Voltage Termination
- ESD Protection Gate-Emitter Zener Diodes
