

April 1995

8A, 100V - 200V Ultrafast Dual Diodes

### Features

- Ultrafast Recovery Time ( $t_{RR} < 35\text{ns}$ )
- Low Forward Voltage
- Low Thermal Resistance
- Planar Design
- Wire-Bonded Construction

### Applications

- General Purpose
- Power Switching Circuits to 100kHz
- Full-Wave Rectification

### Description

RURP810CC, RURP815CC, RURP820CC are low forward voltage drop ultrafast rectifiers ( $t_{RR} < 35\text{ns}$ ). They use an ion-implanted planar epitaxial construction.

These devices are intended for use as output rectifiers and flywheel diodes in a variety of high frequency pulse width modulated and switching regulators. Their low stored charge and attendant fast reverse recovery behavior minimize electrical noise generation and in many circuits markedly reduce the turn-on dissipation of the associated power switching transistors.

#### PACKAGING AVAILABILITY

PART NUMBER	PACKAGE	BRAND
RURP810CC	TO-220AB	RURP810CC
RURP815CC	TO-220AB	RURP815CC
RURP820CC	TO-220AB	RURP820CC

NOTE: When ordering, use the entire part number.
