## LM79MXX Series 3-Terminal Negative Regulators

### General Description

The LM79MXX series of 3-terminal regulators is available with fixed output voltages of  $-5V$ ,  $-12V$ , and  $-15V$ . These devices need only one external component—a compensation capacitor at the output. The LM79MXX series is packaged in the TO-220 power package, and is capable of supplying 0.5A of output current.

These regulators employ internal current limiting, safe area protection, and thermal shutdown for protection against virtually all overload conditions.

Low ground pin current of the LM79MXX series allows output voltage to be easily boosted above the preset value with

a resistor divider. The low quiescent current of these devices with a specified maximum change with line and load ensures good regulation in the voltage boosted mode.

For output voltage other than  $-5V$ ,  $-12V$ , and  $-15V$  the LM137 series provides an output voltage range from  $-1.2V$  to  $-57V$ .

### Features

- Thermal, short circuit and safe area protection
- High ripple rejection
- 0.5A output current
- 4% tolerance on preset output voltage

Input Voltage	
$V_O = -5V$	-25V
$V_O = -12V, -15V$	-35V
Input/Output Differential	
$V_O = -5V$	25V
$V_O = -12V, -15V$	30V

Power Dissipation (Note 2)

Internally Limited

Operating Junction Temperature Range

0°C to +125°C

Storage Temperature Range

-65°C to +150°C

Lead Temperature (Soldering, 10 sec.)

230°C

ESD Susceptibility

TBD

**Electrical Characteristics LM79M05C**

Conditions unless otherwise noted:  $I_{OUT} = 350mA$ ,  $C_{IN} = 2.2\mu F$ ,  $C_{OUT} = 1\mu F$ ,  $0^\circ C \leq T_J \leq +125^\circ C$

Part Number		LM79M05C			Units	
Output Voltage		-5V				
Input Voltage (Unless Otherwise Specified)		-10V				
Symbol	Parameter	Conditions	Min	Typ	Max	
$V_O$	Output Voltage	$T_J = 25^\circ C$	-4.8	-5.0	-5.2	V
		$5mA \leq I_{OUT} \leq 350mA$	-4.75		-5.25	V
$\Delta V_O$	Line Regulation	$T_J = 25^\circ C$ (Note 3)		8	50	mV
$\Delta V_O$	Load Regulation	$T_J = 25^\circ C$ , (Note 3) $5mA \leq I_{OUT} \leq 0.5A$		2	30	mV
$\Delta V_O$	Load Regulation	$T_J = 25^\circ C$ , (Note 3) $5mA \leq I_{OUT} \leq 0.5A$		30	100	mV
$I_Q$	Quiescent Current	$T_J = 25^\circ C$		1	2	mA
$\Delta I_Q$	Quiescent Current Change	With Input Voltage			0.4	mA
		With Load, $5mA \leq I_{OUT} \leq 350mA$			0.4	mA
$V_n$	Output Noise Voltage	$T_A = 25^\circ C$ , $10Hz \leq f \leq 100Hz$		150		$\mu V$
	Ripple Rejection	$f = 120Hz$	54	66		dB
	Dropout Voltage	$T_J = 25^\circ C$ , $I_{OUT} = 0.5A$		1.1		V
$I_{OMAX}$	Peak Output Current	$T_J = 25^\circ C$		800		mA
	Average Temperature Coefficient of Output Voltage	$I_{OUT} = 5mA$ , $0^\circ C \leq T_J \leq 100^\circ C$		-0.4		mV/°C

	Average Temperature Coefficient of Output Voltage	$I_{OUT} = 5\text{mA}$ , $0^\circ\text{C} \leq T_J \leq 100^\circ\text{C}$			-0.8				$\text{mV}/^\circ\text{C}$

**Note 1:** Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but do not guarantee specific performance limits. For guaranteed specifications and test conditions, see the Electrical Characteristics.

**Note 2:** Refer to Typical Performance Characteristics and Design Considerations for details.

**Note 3:** Regulation is measured at a constant junction temperature by pulse testing with a low duty cycle. Changes in output voltage due to heating effects must be taken into account.

## Design Considerations

The LM79MXX fixed voltage regulator series have thermal-overload protection from excessive power, internal short-circuit protection which limits the circuit's maximum current, and output transistor safe-area compensation for reducing the output current as the voltage across the pass transistor is increased.

Although the internal power dissipation is limited, the junction temperature must be kept below the maximum specified temperature in order to meet data sheet specifications. To calculate the maximum junction temperature or heat sink required, the following thermal resistance values should be used:

Package	$\theta_{JC}$ (°C/W)	$\theta_{JA}$ (°C/W)
TO-220	3	40

$$P_{D\text{MAX}} = \frac{T_{J\text{MAX}} - T_A}{\theta_{JC} + \theta_{CA}} \text{ or}$$

$$= \frac{T_{J\text{MAX}} - T_A}{\theta_{JA}} \text{ (Without a Heat Sink)} \quad (1)$$

$$\theta_{CA} = \theta_{CS} + \theta_{SA}$$

Solving for  $T_J$ :

$$T_J = T_A + P_D (\theta_{JC} + \theta_{CA}) \text{ or}$$

$$= T_A + P_D \theta_{JA} \text{ (Without a Heat Sink)}$$

Where

- $T_J$  = Junction Temperature
- $T_A$  = Ambient Temperature
- $P_D$  = Power Dissipation
- $\theta_{JC}$  = Junction-to-Case Thermal Resistance
- $\theta_{CA}$  = Case-to-Ambient Thermal Resistance
- $\theta_{CS}$  = Case-to-Heat Sink Thermal Resistance
- $\theta_{SA}$  = Heat Sink-to-Ambient Thermal Resistance
- $\theta_{JA}$  = Junction-to-Ambient Thermal Resistance

## Typical Applications

Bypass capacitors are necessary for stable operation of the LM79MXX series of regulators over the input voltage and output current ranges. Output bypass capacitors will improve the transient response of the regulator.

The bypass capacitors (2.2 $\mu$ F on the input, 1.0 $\mu$ F on the output), should be ceramic or solid tantalum which have good high frequency characteristics. If aluminum electrolytics are used, their values should be 10 $\mu$ F or larger. The bypass capacitors should be mounted with the shortest leads, and if possible, directly across the regulator terminals.

### Fixed Regulator

DS010483-2

\*Required if regulator is separated from filter capacitor by more than 3". For value given, capacitor must be solid tantalum. 25 $\mu$ F aluminum electrolytic may be substituted.

†Required for stability. For value given, capacitor must be solid tantalum. 25 $\mu$ F aluminum electrolytic may be substituted. Values given may be increased without limit.

For output capacitance in excess of 100 $\mu$ F, a high current diode from input to output (1N4001, etc.) will protect the regulator from momentary input shorts.

### Variable Output

DS010483-3

\*Improves transient response and ripple rejection. Do not increase beyond 50 $\mu$ F.

$$V_{OUT} = V_{SET} \left( \frac{R1 + R2}{R2} \right)$$

Select R2 as follows:

LM79M05C	300 $\Omega$
LM79M12C	750 $\Omega$
LM79M15C	1k

## Typical Applications (Continued)

**±15V, 1 Amp Tracking Regulators**

DS010483-1

\*Resistor tolerance of R4 and R5 determine matching of (+) and (-) outputs.  
 \*\*Necessary only if raw supply filter capacitors are more than 3" from regulators.

**Performance (Typical)**

	(-15)	(+15)
Load Regulation at 0.5A	40mV	2 mV
Output Ripple, $C_{IN} = 3000\mu F$ , $I_L = 0.5A$	100 $\mu V_{rms}$	100 $\mu V_{rms}$
Temperature Stability	50mV	50mV
Output Noise $10Hz \leq f \leq 10kHz$	150 $\mu V_{rms}$	150 $\mu V_{rms}$

**Dual Trimmed Supply**

DS010483-4

**Physical Dimensions** inches (millimeters) unless otherwise noted

**LIFE SUPPORT POLICY**

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT AND GENERAL COUNSEL OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
