## 74VCX162240

## Low-Voltage 1.8/2.5/3.3V 16-Bit Buffer <br> With $26 \Omega$ Series Resistors 3.6 V-Tolerant Inputs and Outputs (3-State, Inverting)

The 74VCX162240 is an advanced performance, inverting 16-bit buffer. It is designed for very high-speed, very low-power operation in $1.8 \mathrm{~V}, 2.5 \mathrm{~V}$ or 3.3 V systems.

When operating at 2.5 V (or 1.8 V ) the part is designed to tolerate voltages it may encounter on either inputs or outputs when interfacing to 3.3 V busses. It is guaranteed to be over-voltage tolerant to 3.6 V .

The 74VCX162240 is nibble controlled with each nibble functioning identically, but independently. It is designed with $26 \Omega$ series resistors in each of the outputs to reduce noise. The control pins may be tied together to obtain full 16-bit operation. The 3-state outputs are controlled by an Output Enable ( $\overline{\mathrm{OEn}}$ ) input for each nibble. When $\overline{\mathrm{OEn}}$ is LOW, the outputs are on. When $\overline{\mathrm{OEn}}$ is HIGH, the outputs are in the high impedance state.

- Designed for Low Voltage Operation: $\mathrm{V}_{\mathrm{CC}}=1.65-3.6 \mathrm{~V}$
- 3.6 V Tolerant Inputs and Outputs
- High Speed Operation: 3.3 ns max for 3.0 to 3.6 V
3.8 ns max for 2.3 to 2.7 V
7.6 ns max for 1.65 to 1.95 V
- Static Drive: $\pm 12 \mathrm{~mA}$ Drive at 3.0 V
$\pm 8 \mathrm{~mA}$ Drive at 2.3 V
$\pm 3 \mathrm{~mA}$ Drive at 1.65 V
- Supports Live Insertion and Withdrawal
- $\mathrm{I}_{\mathrm{OFF}}$ Specification Guarantees High Impedance When $\mathrm{V}_{\mathrm{CC}}=0 \mathrm{~V}$
- Near Zero Static Supply Current in All Three Logic States ( $20 \mu \mathrm{~A}$ ) Substantially Reduces System Power Requirements
- Latchup Performance Exceeds $\pm 300 \mathrm{~mA} @ 125^{\circ} \mathrm{C}$
- ESD Performance: Human Body Model >2000 V; Machine Model >200 V

| toshl tosth | Output-to-Output Skew (Note 5.) |  |  | $\begin{aligned} & 0.5 \\ & 0.5 \end{aligned}$ |  | $\begin{aligned} & 0.5 \\ & 0.5 \end{aligned}$ |  | $\begin{aligned} & \hline 0.75 \\ & 0.75 \end{aligned}$ | ns |

4. For $C_{L}=50 \mathrm{pF}$, add approximately 300 ps to the AC maximum specification.
5. Skew is defined as the absolute value of the difference between the actual propagation delay for any two separate outputs of the same device. The specification applies to any outputs switching in the same direction, either HIGH-to-LOW (toshl) or LOW-to-HIGH (tosLh); parameter guaranteed by design.

[^0]2. $\mathrm{A}_{0}, \mathrm{~B}_{0}$, and $\mathrm{K}_{0}$ are determined by component size. The clearance between the components and the cavity must be within 0.05 mm min to 0.50 mm max. The component cannot rotate more than $10^{\circ}$ within the determined cavity

#### Abstract

ON Semiconductor and are trademarks of Semiconductor Components Industries, LLC (SCILLC). SCILLC reserves the right to make changes without further notice to any products herein. SCILLC makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does SCILLC assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. "Typical" parameters which may be provided in SCILLC data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. SCILLC does not convey any license under its patent rights nor the rights of others. SCILLC products are not designed, intended, or authorized for use as components in systems intended for surgical implant into the body, or other applications intended to support or sustain life, or for any other application in which the failure of the SCILLC product could create a situation where personal injury or death may occur. Should Buyer purchase or use SCILLC products for any such unintended or unauthorized application, Buyer shall indemnify and hold SCILLC and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that SCILLC was negligent regarding the design or manufacture of the part. SCILLC is an Equal Opportunity/Affirmative Action Employer.

## PUBLICATION ORDERING INFORMATION

## NORTH AMERICA Literature Fulfillment:

Literature Distribution Center for ON Semiconductor
P.O. Box 5163, Denver, Colorado 80217 USA

Phone: 303-675-2175 or 800-344-3860 Toll Free USA/Canada
Fax: 303-675-2176 or 800-344-3867 Toll Free USA/Canada
Email: ONlit@hibbertco.com
Fax Response Line: 303-675-2167 or 800-344-3810 Toll Free USA/Canada
N. American Technical Support: 800-282-9855 Toll Free USA/Canada

EUROPE: LDC for ON Semiconductor - European Support
German Phone: (+1) 303-308-7140 (Mon-Fri 2:30pm to 7:00pm CET) Email: ONlit-german@hibbertco.com
French Phone: (+1) 303-308-7141 (Mon-Fri 2:00pm to 7:00pm CET) Email: ONlit-french@hibbertco.com
English Phone: (+1) 303-308-7142 (Mon-Fri 12:00pm to 5:00pm GMT) Email: ONlit@hibbertco.com

EUROPEAN TOLL-FREE ACCESS*: 00-800-4422-3781
*Available from Germany, France, Italy, UK

## CENTRAL/SOUTH AMERICA:

Spanish Phone: 303-308-7143 (Mon-Fri 8:00am to 5:00pm MST) Email: ONlit-spanish@hibbertco.com

ASIA/PACIFIC: LDC for ON Semiconductor - Asia Support
Phone: 303-675-2121 (Tue-Fri 9:00am to 1:00pm, Hong Kong Time) Toll Free from Hong Kong \& Singapore: 001-800-4422-3781
