## DUAL 4-INPUT MULTIPLEXER

The MC54/74F153 is a high-speed Dual 4-Input Multiplexer with common select inputs and individual enable inputs for each section. It can select two lines of data from four sources. The two buffered outputs present data in the true (non-inverted) form. In addition to multiplexer operation, the F153 can generate any two functions of three variables.

## MC54/74F153

## FUNCTIONAL DESCRIPTION

The MC54/74F153 is a Dual 4-Input Multiplexer. It can select two bits of data from up to four sources under the control of the common Select Inputs ( $\mathrm{S}_{0}, \mathrm{~S}_{1}$ ). The two 4 -input multiplexer circuits have individual active LOW Enables ( $\bar{E}_{a}, \bar{E}_{b}$ ) which can be used to strobe the outputs independently. When the Enables ( $\overline{\mathrm{E}}_{\mathrm{a}}, \overline{\mathrm{E}}_{\mathrm{b}}$ ) are HIGH, the corresponding outputs ( $\mathrm{Z}_{\mathrm{a}}$, $\left.Z_{b}\right)$ are forced LOW.

The F153 is the logic implementation of a 2-pole, 4-position switch, where the position of the switch is determined by the logic levels supplied to the two Select Inputs. The logic equations for the outputs are shown below:

$$
\begin{aligned}
\mathrm{Z}_{\mathrm{a}}= & \overline{\mathrm{E}}_{\mathrm{a}} \cdot\left(\mathrm{I}_{0 \mathrm{a}} \cdot \overline{\mathrm{~S}}_{1} \cdot \overline{\mathrm{~S}}_{0}+\mathrm{I}_{1 \mathrm{a}} \cdot \overline{\mathrm{~S}}_{1} \cdot \mathrm{~S}_{0}+\right. \\
& \left.\mathrm{I}_{2 \mathrm{a}} \cdot \mathrm{~S}_{1} \cdot \overline{\mathrm{~S}}_{0}+\mathrm{I}_{3 \mathrm{a}} \cdot \mathrm{~S}_{1} \cdot \mathrm{~S}_{0}\right) \\
\mathrm{Z}_{\mathrm{b}}= & \overline{\mathrm{E}}_{\mathrm{b}} \cdot\left(\mathrm{I}_{0 \mathrm{~b}} \cdot \overline{\mathrm{~S}}_{1} \cdot \overline{\mathrm{~S}}_{0}+\mathrm{I}_{1 \mathrm{~b}} \cdot \overline{\mathrm{~S}}_{1} \cdot \mathrm{~S}_{0}+\right. \\
& \left.\mathrm{I}_{2 \mathrm{~b}} \cdot \mathrm{~S}_{1} \cdot \overline{\mathrm{~S}}_{0}+\mathrm{I}_{3 \mathrm{~b}} \cdot \mathrm{~S}_{1} \cdot \mathrm{~S}_{0}\right)
\end{aligned}
$$

The F153 can be used to move data from a group of registers to a common output bus. The particular register from which the data came would be determined by the state of the Select Inputs. A less obvious application is as a function generator. The F153 can generate two functions of three variables. This is useful for implementing highly irregular random logic.

## FUNCTION TABLE

[^0]:    NOTES:

    1. For conditions shown as MIN or MAX, use the appropriate value specified under recommended operating conditions for the applicable device type.
    2. Not more than one output should be shorted at a time, nor for more than 1 second.
