# **ON Semiconductor**®

# To learn more about ON Semiconductor, please visit our website at <u>www.onsemi.com</u>

Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (\_), the underscore (\_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (\_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at <a href="https://www.onsemi.com">www.onsemi.com</a>. Please email any questions regarding the system integration to <a href="https://www.onsemi.com">Fairchild\_questions@onsemi.com</a>.

# FDPC8014AS PowerTrench<sup>®</sup> Power Clip 25V Asymmetric Dual N-Channel MOSFET

#### Features

Q1: N-Channel

- Max  $r_{DS(on)}$  = 3.8 m $\Omega$  at V<sub>GS</sub> = 10 V, I<sub>D</sub> = 20 A
- Max  $r_{DS(on)}$  = 4.7 m $\Omega$  at V<sub>GS</sub> = 4.5 V, I<sub>D</sub> = 18 A

Q2: N-Channel

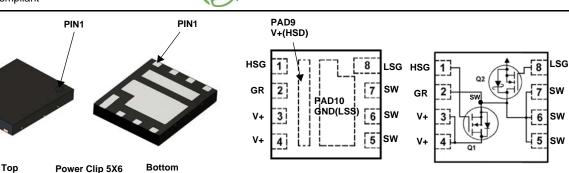

- Max  $r_{DS(on)}$  = 1.0 m $\Omega$  at V<sub>GS</sub> = 10 V, I<sub>D</sub> = 40 A
- Max  $r_{DS(on)}$  = 1.2 m $\Omega$  at V<sub>GS</sub> = 4.5 V, I<sub>D</sub> = 37 A
- Low Inductance Packaging Shortens Rise/fall Times, Resulting in Lower Switching Losses
- MOSFET Integration Enables Optimum Layout for Lower Circuit Inductance and Reduced Switch Node Ringing
- RoHS Compliant

### **General Description**

This device includes two specialized N-Channel MOSFETs in a dual package. The switch node has been internally connected to enable easy placement and routing of synchronous buck converters. The control MOSFET (Q1) and synchronous SyncFET<sup>TM</sup> (Q2) have been designed to provide optimal power efficiency.

#### Applications

- Computing
- Communications
- General Purpose Point of Load

Notes:

1. R<sub>BJA</sub> is determined with the device mounted on a 1 in<sup>2</sup> pad 2 oz copper pad on a 1.5 x 1.5 in. board of FR-4 material. R<sub>BJC</sub> is guaranteed by design while R<sub>BCA</sub> is determined by the user's board design.

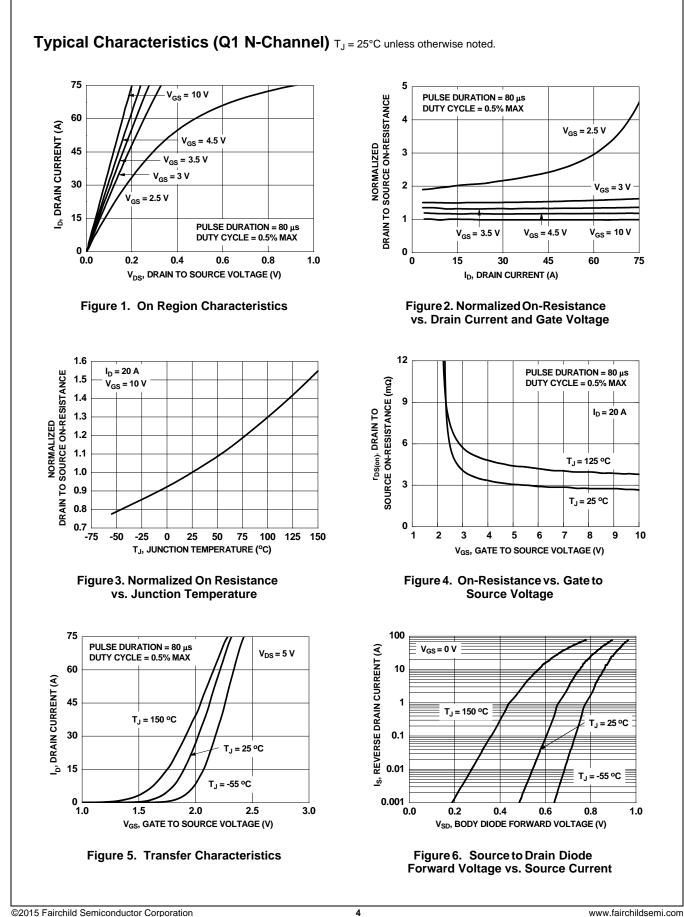

3. Q1 : E<sub>AS</sub> of 73 mJ is based on starting T<sub>J</sub> = 25  $^{\circ}$ C; N-ch: L = 3 mH, I<sub>AS</sub> = 7 A, V<sub>DD</sub> = 30 V, V<sub>GS</sub> = 10 V. 100% test at L= 0.1 mH, I<sub>AS</sub> = 24 A.

Q2:  $E_{AS}$  of 294 mJ is based on starting  $T_J$  = 25  $^{0}$ C; N-ch: L = 3 mH,  $I_{AS}$  = 14 A,  $V_{DD}$  = 25 V,  $V_{GS}$  = 10 V. 100% test at L= 0.1 mH,  $I_{AS}$  = 46 A.

4. Pulsed Id please refer to Fig 11 and Fig 24 SOA graph for more details.

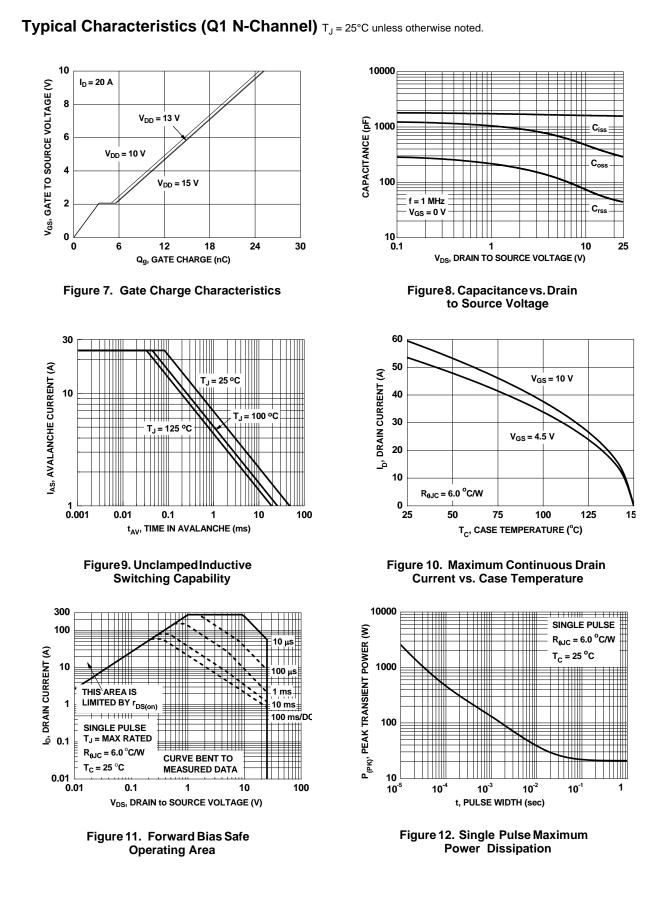

5. The continuous V<sub>DS</sub> rating is 25 V; However, a pulse of 30 V peak voltage for no longer than 100 ns duration at 600 KHz frequency can be applied.

6. Computed continuous current limited to Max Junction Temperature only, actual continuous current will be limited by thermal & electro-mechanical application board design.

### Typical Characteristics (continued)

# SyncFET<sup>™</sup> Schottky body diode Characteristics

Fairchild's SyncFET<sup>TM</sup> process embeds a Schottky diode in parallel with PowerTrench<sup>®</sup> MOSFET. This diode exhibits similar characteristics to a discrete external Schottky diode in parallel with a MOSFET. Figure 27 shows the reverses recovery characteristic of the FDPC8014AS.

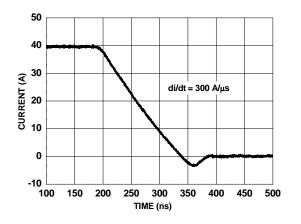

Figure 27. FDPC8014AS SyncFET<sup>™</sup> Body Diode Reverse Recovery Characteristic

Schottky barrier diodes exhibit significant leakage at high temperature and high reverse voltage. This will increase the power in the device.

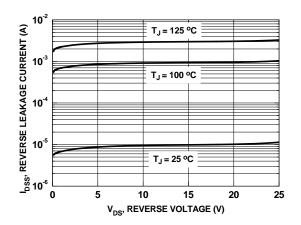

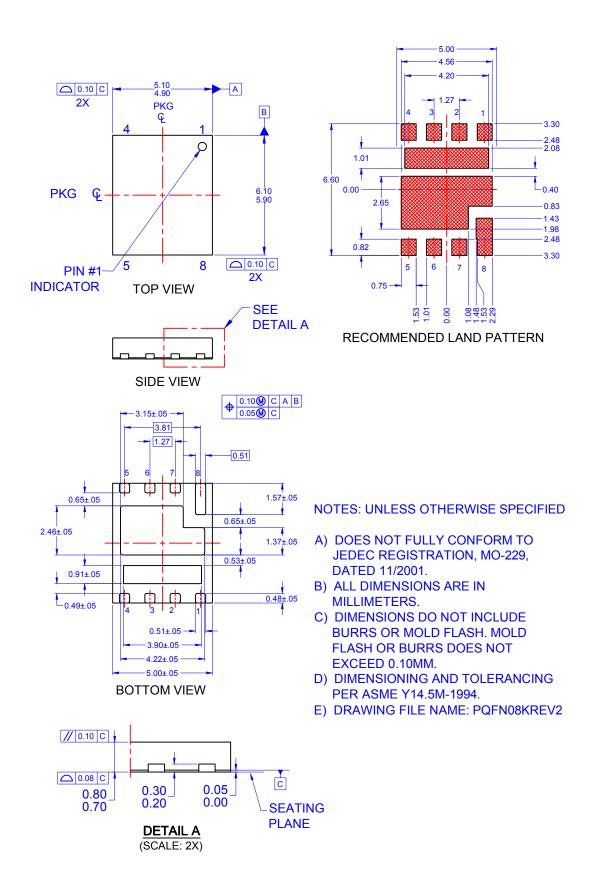

Figure 28. SyncFET<sup>™</sup> Body Diode Reverse Leakage vs. Drain-source Voltage
