

## DM7160 Magnitude Comparator

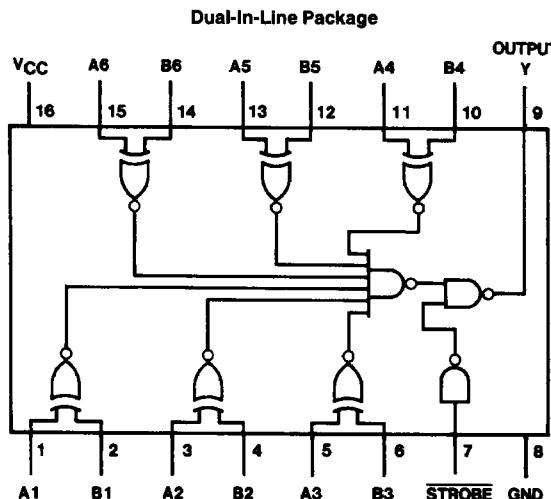

### General Description

This device offers comparisons to determine equality between two binary words. The DM7160 compares two six-bit words. A strobe override is provided. When the strobe is taken to a high logic level, the output is forced to a high logic level. The device also features open-collector outputs for expansion.

### Features

- Typical propagation delay 21 ns
- Typical power dissipation 205 mW
- Open-collector outputs for expansion

Operating Free Air Temperature Range DM71	–55°C to +125°C
Storage Temperature Range	–65°C to +150°C

Note: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.
