

# SERIES 24 AND 28 STANDARD AND LOW POWER PROGRAMMABLE READ-ONLY MEMORIES

SEPTEMBER 1979—REVISED AUGUST 1984

- Expanded Family of Standard and Low Power PROMs
- Titanium-Tungsten (Ti-W) Fuse Links for Reliable Low-Voltage Full-Family-Compatible Programming
- Full Decoding and Fast Chip Select Simplify System Design
- P-N-P Inputs for Reduced Loading On System Buffers/Drivers
- Each PROM Supplied With a High Logic Level Stored at Each Bit Location
- Applications Include:
  - Microprogramming/Firmware Loaders
  - Code Converters/Character Generators
  - Translators/Emulators
  - Address Mapping/Look-Up Tables

## description

The 24 and 28 Series of monolithic TTL programmable read-only memories (PROMs) feature an expanded selection of standard and low-power PROMs. This expanded PROM family provides the system designer with considerable flexibility in upgrading existing designs or optimizing new designs. Featuring proven titanium-tungsten (Ti-W) fuse links with low-current MOS-compatible p-n-p inputs, all family members utilize a common programming technique designed to program each link with a 20-microsecond pulse.

The 4096-bit and 8192-bit PROMs are offered in a wide variety of packages ranging from 18-pin 300 mil-wide thru 24 pin 600 mil-wide. The 16,384-bit PROMs provide twice the bit density of the 8192-bit PROMs and are provided in a 24 pin 600 mil-wide package.

All PROMs are supplied with a logic-high output level stored at each bit location. The programming procedure will produce open-circuits in the Ti-W metal links, which reverses the stored logic level at the selected location. The procedure is irreversible; once altered, the output for that bit location is permanently programmed. Outputs that have never been altered may later be programmed to supply the opposite output level. Operation of the unit within the recommended operating conditions will not alter the memory content.

Active level(s) at the chip-select input(s) (S or  $\bar{S}$ ) enables all of the outputs. An inactive level at any chip-select input causes all outputs to be in the three-state, or off condition.

## standard PROMs

The standard PROM members of Series 24 and 28 offer high performance for applications which require the uncompromised speed of Schottky technology. The fast chip-select access times allow additional decoding delays to occur without degrading speed performance.

TYPE NUMBER	PACKAGE <sup>†</sup> AND TEMPERATURE RANGE DESIGNATORS	OUTPUT CONFIGURATION <sup>‡</sup>	BIT SIZE (ORGANIZATION)	TYPICAL PERFORMANCE		
				ACCESS TIMES		POWER DISSIPATION
				ADDRESS	SELECT

PROMS

# SERIES 24 AND 28 STANDARD AND LOW-POWER PROGRAMMABLE READ-ONLY MEMORIES

## low power PROMs

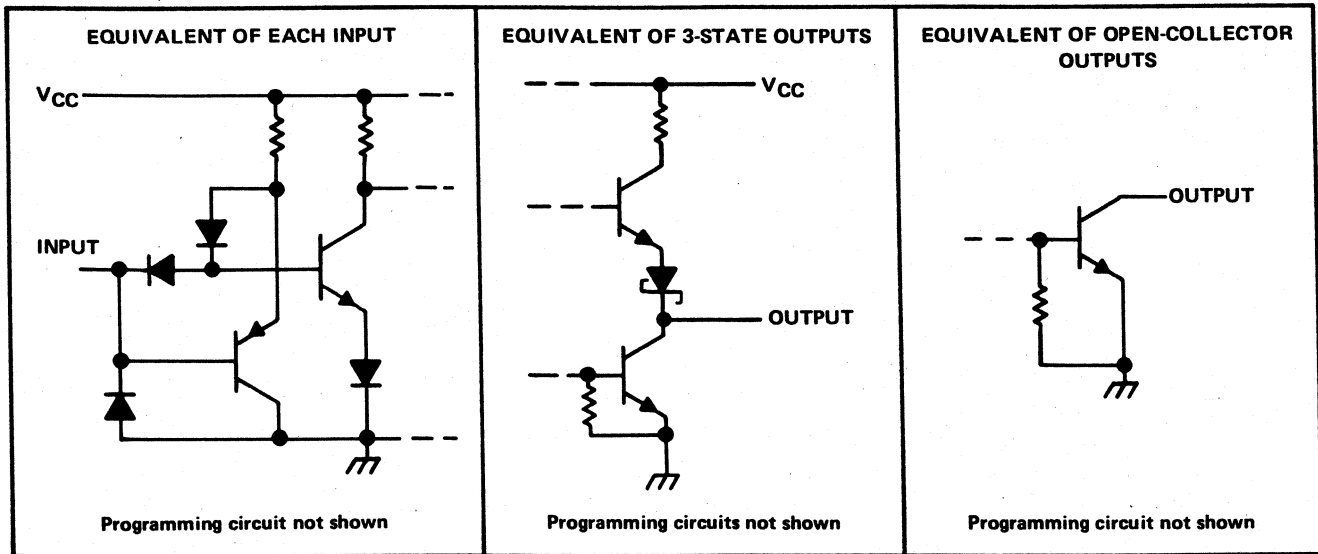

To upgrade systems utilizing MOS EPROMs or MOS PROMs, or when designing new systems which do not require maximum speed, the low-power PROM family offers the output drive and speed performance of bipolar technology, plus reduced power dissipation.

TYPE NUMBER	PACKAGE <sup>†</sup> AND TEMPERATURE RANGE DESIGNATORS	OUTPUT CONFIGURATION <sup>‡</sup>	BIT SIZE (ORGANIZATION)	TYPICAL PERFORMANCE		
				ACCESS TIMES		POWER DISSIPATION
				ADDRESS	SELECT	
TBP28L22	MJ, J, N	▽	2048 Bits (256W × 8B)	45 ns	20 ns	375 mW
TBP28LA22	MJ, J, N	◊				
TBP28L42	MJ, J, N	▽	4096 Bits (512W × 8B)	60 ns	30 ns	250 mW
TBP28L46	MJW, JW, NW	▽				
TBP28L86A	MJW, JW, NW	▽	8192 Bits (1024W × 8B)	80 ns	35 ns	350 mW
TBP28L166	NW	▽	16,384 Bits (2084W × 8B)	65 ns	30 ns	350 mW

<sup>†</sup> MJ and MJW designates full-temperature-range circuits (formerly 54 Family), J, JW, N, and NW designates commercial-temperature-range circuits (formerly 74 Family).

<sup>‡</sup> ▽ = three state, ◊ = open collector.

## schematics of inputs and outputs

## absolute maximum ratings over operating free-air temperature range (unless otherwise noted)

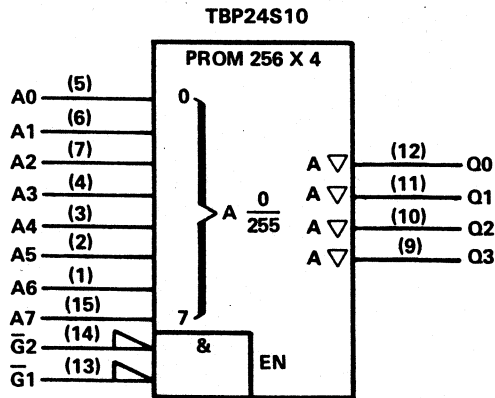

Supply voltage (see Note 1)	7 V
Input voltage	5.5 V
Chip-select peak input voltage (S, S1, S2) (see Note 2)	11 V
Off-state output voltage	5.5 V
Off-state peak output voltage (see Note 2)	16.25 V
Operating free-air temperature range: Full-temperature-range circuits (M suffix)	-55°C to 125°C
Commercial-temperature-range circuits	0°C to 70°C
Storage temperature range	-65°C to 150°C

NOTES: 1. Voltage values are with respect to network ground terminal.

2. These ratings apply only under the conditions described in the programming procedure.

PROMS

# SERIES 24 AND 28 PROGRAMMABLE READ-ONLY MEMORIES

recommended operating conditions for programming (see Figure 1)

		MIN	NOM	MAX	UNIT
Steady-state supply voltage	$V_{CC}$	4.75	5	5.25	V
Input voltage	$V_{IH}$	3	4	5	V
	$V_{IL}$	0	0	0.5	
Voltage at all outputs except the one to be programmed		0	0	0.5	V
Supply voltage level to program a bit	$V_{CC(pr)}$	5.75	6	6.25	V
Select or enable level to program a bit	$V_{S(pr)}$	9.75	10	11	V
Output level during interval $t_5$	$V_{O(pr)}$	15.75	16	16.25	V
Supply voltage during verification (see step 14)	Low	4.4	4.5	4.6	V
	High	5.4	5.5	5.6	
Time from $V_{CC}$ to settle and to verify need to program	$t_1$	0	5	10	$\mu s$
Time from $V_{CC} = 6 V$ until chip select (enable) is at 10 V-	$t_2$	5	5	10	$\mu s$
Time from chip select (enable) high to start of program ramp	$t_3$	0.1	5	10	$\mu s$
Ramp time, output program pulse	$t_4$	10	15	20	$\mu s$
Duration of output program pulse	$t_5$	15	20	20	$\mu s$
Time from end of program pulse to chip select (enable) low	$t_6$	5	5	10	$\mu s$
Time from chip select (enable) $V_{CC} = 0 V$	$t_7$	0.1	5	5	$\mu s$
Time for cooling between bits	$t_8$	30	50	100	$\mu s$
Time for cooling between words	$t_9$	30	50		$\mu s$
Free-air temperature	$T_A$	20	25	30	$^{\circ}C$

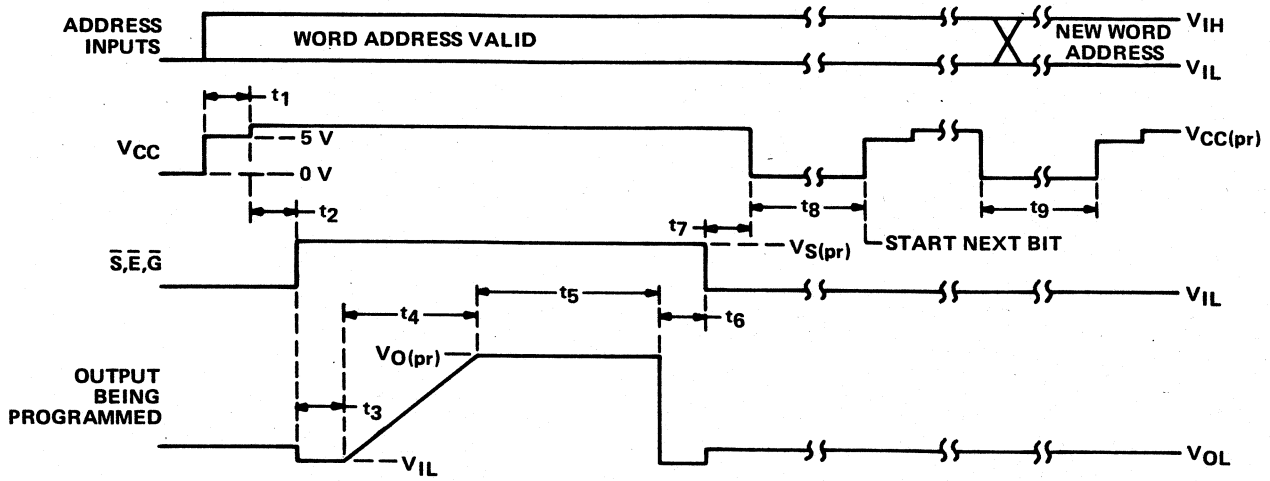

### step-by-step programming instruction (see Figure 1)

1. Address the word to be programmed, apply 5 volts to  $V_{CC}$  and active levels to all chip select ( $S$  and  $\bar{S}$ ) or chip enable ( $E$  and  $\bar{E}$ ) inputs.
2. Verify the status of a bit location by checking the output level.
3. Decrease  $V_{CC}$  to 0 volts.
4. For bit locations that do not require programming, skip steps 5 through 11.
5. Increase  $V_{CC}$  to  $V_{CC(pr)}$  with a minimum current capability of 250 milliamperes.
6. Apply  $V_{S(pr)}$  to all the  $\bar{S}$ ,  $\bar{E}$  or  $\bar{G}$  inputs.  $I_I \leq 25$  milliamperes. Active-high enables may be left high.
7. Connect all outputs, except the one to be programmed, to  $V_{IL}$ . Only one bit is to be programmed at a time.
8. Apply the output programming pulse for 20 microseconds. Minimum current capability of the programming supply should be 250 milliamperes.
9. After terminating the output pulse, disconnect all outputs from  $V_{IL}$  conditions.
10. Reduce the voltage at  $\bar{S}$ ,  $\bar{E}$ , or  $\bar{G}$  inputs to  $V_{II}$ .
11. Decrease  $V_{CC}$  to 0 volts.
12. Return to step 4 until all outputs in the word have been programmed.
13. Repeat steps 2 through 11 for each word in memory.
14. Verify programming of every word after all words have been programmed using  $V_{CC}$  values of 4.5 and 5.5 volts.

**PACKAGING INFORMATION**

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
JBP28L42MJ	ACTIVE	CDIP	J	20	1	TBD	Call TI	N / A for Pkg Type	-55 to 125	JBP28L42MJ	
JBP28S42MJ	ACTIVE	CDIP	J	20	1	TBD	Call TI	N / A for Pkg Type	-55 to 125	JBP28S42MJ	

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
