## Datasheet

## 74ABT373

## Octal Transparent Latch with 3-STATE Outputs

The ABT373 consists of eight latches with 3-STATE outputs for bus organized system applications. The flip-flops appear transparent to the data when Latch Enable (LE) is HIGH. When LE is LOW, the data that meets the setup times is latched. Data appears on the bus when the Output Enable $(\overline{\mathrm{OE}})$ is LOW. When $\overline{\mathrm{OE}}$ is HIGH the bus output is in the high impedance state.

## Rochester Electronics Manufactured Components

Rochester branded components are manufactured using either die/wafers purchased from the original suppliers or Rochester wafers recreated from the original IP. All re-creations are done with the approval of the Original Component Manufacturer (OCM).

Parts are tested using original factory test programs or Rochester developed test solutions to guarantee product meets or exceeds the OCM data sheet.

## Quality Overview

- ISO-9001
- AS9120 certification
- Qualified Manufacturers List (QML) MIL-PRF-35835
- Class Q Military
- Class V Space Level
- Qualified Suppliers List of Distributors (QSLD)
- Rochester is a critical supplier to DLA and meets all industry and DLA standards.

Rochester Electronics, LLC is committed to supplying products that satisfy customer expectations for quality and are equal to those originally supplied by industry manufacturers.

> The original manufacturer's datasheet accompanying this document reflects the performance and specifications of the Rochester manufactured version of this device. Rochester Electronics guarantees the performance of its semiconductor products to the original OCM specifications. 'Typical’ values are for reference purposes only. Certain minimum or maximum ratings may be based on product characterization, design, simulation, or sample testing.

## FOR REFERENCE ONLY

## 74ABT373

## Octal Transparent Latch with 3－STATE Outputs

## Features

■ 3－STATE outputs for bus interfacing
■ Output sink capability of 64 mA ，source capability of 32 mA
■ Guaranteed output skew
■ Guaranteed multiple output switching specifications
■ Output switching specified for both 50 pF and 250 pF loads
－Guaranteed simultaneous switching，noise level and dynamic threshold performance
－Guaranteed latchup protection
－High－impedance，glitch－free bus loading during entire power up and power down
■ Nondestructive，hot－insertion capability

## General Description

The ABT373 consists of eight latches with 3－STATE outputs for bus organized system applications．The flip－ flops appear transparent to the data when Latch Enable （LE）is HIGH．When LE is LOW，the data that meets the setup times is latched．Data appears on the bus when the Output Enable（ $\overline{\mathrm{OE}}$ ）is LOW．When $\overline{\mathrm{OE}}$ is HIGH the bus output is in the high impedance state．

## Functional Description

The ABT373 contains eight D-type latches with 3-STATE output buffers. When the Latch Enable (LE) input is HIGH, data on the $D_{n}$ inputs enters the latches. In this condition the latches are transparent, i.e., a latch output will change state each time its $D$ input changes. When LE is LOW, the latches store the information that was present on the D inputs at setup time preceding the HIGH-to-LOW transition of LE. The 3-STATE buffers are controlled by the Output Enable ( $\overline{\mathrm{OE}})$ input. When $\overline{\mathrm{OE}}$ is LOW, the buffers are in the bi-state mode. When $\overline{\mathrm{OE}}$ is HIGH the buffers are in the high impedance mode but this does not interfere with entering new data into the latches.

## Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

1. Either voltage limit or current limit is sufficient to protect inputs.

## Recommended Operating Conditions

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to absolute maximum ratings.

## Notes:

7. This specification is guaranteed but not tested. The limits apply to propagation delays for all paths described switching in phase (i.e., all LOW-to-HIGH, HIGH-to-LOW, etc.).
8. This specification is guaranteed but not tested. The limits represent propagation delay with 250 pF load capacitors in place of the 50 pF load capacitors in the standard AC load. This specification pertains to single output switching only.
9. This specification is guaranteed but not tested. The limits represent propagation delays for all paths described switching in phase (i.e., all LOW-to-HIGH, HIGH-to-LOW, etc.) with 250pF load capacitors in place of the 50pF load capacitors in the standard AC load.
10. The 3-STATE delay times are dominated by the RC network ( $500 \Omega, 250 \mathrm{pF}$ ) on the output and has been excluded from the datasheet.

## Notes:

11. This specification is guaranteed but not tested. The limits represent propagation delays with 250 pF load capacitors in place of the 50 pF load capacitors in the standard AC load.
12. This specification is guaranteed but not tested. The limits apply to propagation delays for all paths described switching in phase (i.e., all LOW-to-HIGH, HIGH-to-LOW, etc.).
13. Skew is defined as the absolute value of the difference between the actual propagation delays for any two separate outputs of the same device. The specification applies to any outputs switching HIGH-to-LOW (toshl), LOW-to-HIGH ( $\mathrm{t}_{\mathrm{OLLH}}$ ), or any combination switching LOW-to-HIGH and/or HIGH-to-LOW ( $\mathrm{t}_{\mathrm{OST}}$ ). This specification is guaranteed but not tested.
14. Propagation delay variation is for a given set of conditions (i.e., temperature and $\mathrm{V}_{\mathrm{CC}}$ ) from device to device. This specification is guaranteed but not tested.
15. This describes the difference between the delay of the LOW-to-HIGH and the HIGH-to-LOW transition on the same pin. It is measured across all the outputs (drivers) on the same chip, the worst (largest delta) number is the guaranteed specification. This specification is guaranteed but not tested.

Physical Dimensions (Continued)
Dimensions are in millimeters unless otherwise noted.

DIMENSIONS ARE IN MILLIMETERS

NOTES:
A. CONFORMS TO JEDEC REGISTRATION MD-153, VARIATION AC, REF NOTE 6. DATE 7/93.
b. DIMENSIONS ARE IN MILLIMETERS.
c. DIMENSIONS ARE EXCLUSIVE OF BURRS, MOLDS FLASH, AND TE BAR EXTRUSIONS.

DETAIL A
D. DIMENSIONS AND TOLERANCES PER ANSI Y14.5M, 1982.

## DISCLAIMER

FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TO MAKE CHANGES WITHOUT FURTHER NOTICE TO ANY PRODUCTS HEREIN TO IMPROVE RELIABILITY, FUNCTION OR DESIGN. FAIRCHILD DOES NOT ASSUME ANY LIABILITY ARISING OUT OF THE APPLICATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS. THESE SPECIFICATIONS DO NOT EXPAND THE TERMS OF FAIRCHILD'S WORLDWIDE TERMS AND CONDITIONS, SPECIFICALLY THE WARRANTY THEREIN, WHICH COVERS THESE PRODUCTS.

## LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF FAIRCHILD SEMICONDUCTOR CORPORATION.

As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.
2. A critical component in any component of a life support, device, or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

PRODUCT STATUS DEFINITIONS
Definition of Terms

| Datasheet Identification | Product Status | Definition |
| :--- | :--- | :--- |
| Advance Information | Formative or In Design | This datasheet contains the design specifications for product <br> development. Specifications may change in any manner without notice. |
| Preliminary | First Production | This datasheet contains preliminary data; supplementary data will be <br> published at a later date. Fairchild Semiconductor reserves the right to <br> make changes at any time without notice to improve design. |
| No Identification Needed | Full Production | This datasheet contains final specifications. Fairchild Semiconductor <br> reserves the right to make changes at any time without notice to improve <br> design. |
| Obsolete | Not In Production | This datasheet contains specifications on a product that has been <br> discontinued by Fairchild Semiconductor. The datasheet is printed for <br> reference information only. |
