NOTES:

1. Parameters listed in Table 3 are controlled via design or process parameters and are not directly tested at final production. These parameters are lab characterized upon initial design release, or upon design changes. These parameters are guaranteed by characterization based upon data from multiple production runs which reflect lot to lot and within lot variation.
2. Full Power Bandwidth guarantee based on Slew Rate measurement using $FPBW = Slew\ Rate/(2\pi V_{PEAK})$.
3. Quiescent Power Consumption based upon Quiescent Supply Current test maximum. (No load on output.)
